The Hague, July 27, 2023

In accordance with article 7(1)(b) of the Luxembourg law of 11 January 2008 on transparency requirements, as amended (the "**Transparency Law**"), the obligation to publish annual and half-yearly financial reports under articles 3 and 4 of the Transparency Law does not apply to Repsol International Finance B.V. (the "**Company**").

Nonetheless, pieces of information contained in the Interim Consolidated Financial Statements and Interim Management Report for the first half of 2023 prepared by Repsol S.A., acting as guarantor under the Company's multi-issuer EUR 10,000,000,000 Guaranteed Euro Medium Term Notes Programme, may constitute inside information within the meaning of Regulation (EU) No 596/2014 on market abuse and therefore the Company has decided to disseminate the attached Interim Consolidated Financial Statements and Interim Management Report for the first half of 2023, including the Limited Review Report accordingly (the "**Interim Consolidated Financial Report January-June 2023**").

The Interim Consolidated Financial Report January-June 2023 was filed yesterday by Repsol, S.A. with the Spanish Securities Market Commission (Comisión Nacional del Mercado de Valores).

Repsol, S.A. and investees comprising the Repsol Group

Report on limited review of condensed consolidated interim financial statements and consolidated interim management report as at 30 June 2023

This version of our report is a free translation of the original, which was prepared in Spanish. All possible care has been taken to ensure that the translation is an accurate representation of the original. However, in all matters of interpretation of information, views or opinions, the original language version of our report takes precedence over this translation.

Report on limited review of condensed consolidated interim financial statements

To the shareholders of Repsol, S.A.

Introduction

We have performed a limited review of the accompanying condensed consolidated interim financial statements (hereinafter, the interim financial statements) of Repsol, S.A. (hereinafter, the Parent company) and investees comprising the Repsol Group (hereinafter, the Group), which comprise the balance sheet as at 30 June 2023, and the income statement, the statement of recognized income and expense, the statement of changes in equity, the statement of cash flows and related notes, all condensed and consolidated, for the six-month period then ended. The Parent company's directors are responsible for the preparation of these interim financial statements in accordance with the requirements of International Accounting Standard (IAS) 34, Interim Financial Reporting, as adopted by the European Union, for the preparation of condensed interim financial statements, as provided in Article 12 of Royal Decree 1362/2007. Our responsibility is to express a conclusion on these interim financial statements based on our limited review.

Scope of review

We conducted our limited review in accordance with International Standard on Review Engagements 2410, Review of Interim Financial Information Performed by the Independent Auditor of the Entity. A limited review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A limited review is substantially less in scope than an audit conducted in accordance with legislation governing the audit practice in Spain and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim financial statements.

Conclusion

Based on our limited review, that cannot be considered as an audit, nothing has come to our attention that causes us to believe that the accompanying interim financial statements for the six-month period ended 30 June 2023 have not been prepared, in all material respects, in accordance with the requirements of International Accounting Standard (IAS) 34, Interim Financial Reporting, as adopted by the European Union, as provided in Article 12 of Royal Decree 1362/2007, for the preparation of condensed interim financial statements.

Emphasis of matter

We draw attention to note 1.3.1 of the condensed consolidated interim financial statements, in which it is mentioned that these condensed consolidated interim financial statements do not include all the information required in a complete set of consolidated financial statements prepared in accordance with International Financial Reporting Standards, as adopted by the European Union, and therefore the accompanying condensed consolidated interim financial statements should be read together with the consolidated annual accounts of the Group for the year ended 31 December 2022. Our conclusion is not modified in respect of this matter.

Other matters

Consolidated interim management report

The accompanying consolidated interim management report for the six-month period ended 30 June 2023 contains the explanations which the Parent company's directors consider appropriate regarding the principal events of this period and their impact on the interim financial statements presented, of which it does not form part, as well as the information required under the provisions of Article 15 of Royal Decree 1362/2007. We have verified that the accounting information contained in this management report is in agreement with that of the interim financial statements for the six-month period ended 30 June 2023. Our work as auditors is limited to checking the consolidated interim management report in accordance with the scope mentioned in this paragraph and does not include a review of information other than that obtained from Repsol, S.A. and investees comprising the Repsol Group's accounting records.

Preparation of this review report

This report has been prepared at the request of the Board of Directors of Repsol, S.A. in relation to the publication of the half-yearly financial report required by Article 100 of Law 6/2023, of March 17, on Securities Markets and Investment Services.

(1) GENERAL INFORMATION

1.1 About these Interim Financial Statements

The accompanying interim condensed consolidated financial statements of Repsol, S.A. and its investees (hereinafter, "Interim Financial Statements"), comprising the Repsol Group (hereinafter, "Repsol," "Repsol Group", "Group" or "Company"), present fairly the Group's equity and financial position at June 30, 2023, as well as the Group's consolidated earnings, the changes in consolidated equity and the consolidated cash flows for the six-month period then ended.

The interim consolidated management report for the first half of the year is published together with the Interim Financial Statements. Both were approved by the Board of Directors of Repsol, S.A. at its meeting on July 26, 2023 and are available at www.repsol.com.

In accordance with the provisions of IAS 34 "*Interim Financial Reporting*", these Interim Financial Statements are prepared solely to update the content of the most recent annual consolidated financial statements published, focusing on new activities, events and circumstances that have taken place during the first six months of the year and that were significant, without duplicating the information published in the annual consolidated financial statements for the previous year. To facilitate the correct understanding of information contained in these Interim Financial Statements and given that they do not contain information required by comprehensive financial statements prepared pursuant to IFRS-EU, they must be read in conjunction with the Group's 2022 consolidated financial statements, which were approved at the Annual General Meeting of Repsol, S.A. on May 25, 2023 and are available at www.repsol.com.

1.2 About Repsol

Repsol is a group of companies with a presence worldwide that, with a vision of being a multi-energy efficient, sustainable and competitive company, performs activities in the hydrocarbon sector throughout its entire value chain (exploration, development and production of crude oil and natural gas, refining, production, transportation and sale of a wide range of oil and petrochemical products, oil derivatives and natural gas), as well as activities for the generation and sale of electricity.

The Group operates in several business segments, the main metrics of which are summarized below (metrics calculated according to the Group's reporting model)[1]:

	Revenue from ordinary activities(1)		Adjusted income		Free cash flow		Capital employed	
€ Million	**06/30/2023**	**06/30/2022**	**06/30/2023**	**06/30/2022**	**06/30/2023**	**06/30/2022**	**06/30/2023**	**06/30/2022**

Note: A description of the segments is provided in Note 2.2. All figures are calculated in accordance with the Group's reporting model described in Note 2.3.

(1) Corresponds to the sum of "*Sales*" and "*Income from services rendered and other income*"(see Appendix III).

Appendix IIA of the consolidated financial statements for 2022 details the main companies that form part of the Repsol Group and that formed part of its scope of consolidation at that date. Appendix I of these Interim Financial Statements details the changes in the composition of the Group that have taken place during the first six months of 2023, the most significant of which are included in the next section.

The activities of Repsol, S.A. and its subsidiaries are subject to extensive regulation, as described in Appendix III to the consolidated financial statements for 2022.

[1] Effective as of January 1, 2023, Repsol has revised its financial information reporting model (for more information, see Note 2. Segment information).

1.3 Criteria for preparing these Interim Financial Statements

1.3.1 General principles

These Interim Financial Statements have been prepared using the accounting records of the investees that form part of the Group under the International Financial Reporting Standards adopted by the European Union (IFRS-EU) as of June 30, 2023, and, specifically, pursuant to the requirements set out in International Accounting Standard (IAS) 34 "*Interim Financial Reporting*", in addition to other provisions of the applicable regulatory framework.

The Repsol Group prepares its interim financial statements to include its investments in all its subsidiaries, joint arrangements and associates, presenting them in millions of euros unless otherwise indicated.

1.3.2 Comparative information

The Group's activities comprise a range of different businesses and are carried out in an international environment. Therefore, the seasonal effect for some of its businesses is not material. However, the activities of some businesses are affected by seasonality, the most relevant being those related to the sale of fuel at service stations, liquefied petroleum gas (LPG), residential natural gas and electricity in Spain.

1.3.3 New accounting standards

The new developments in the accounting standards applied by the Group as of January 1, 2023 did not have a significant impact on the financial statements given their nature and scope.[2] The following table breaks down the standards and amendments to standards issued by the IASB that will be mandatory in the future:

Pending adoption by the European Union	Date of first application
Amendments to IAS 12 – *International Tax Reform – Pillar Two Model Rules*	January 1, 2023
Amendments to IAS 7 and IFRS 7 – *Supplier Finance Arrangements*	January 1, 2024
Amendments to IAS 1 – *Classification of Liabilities as Current or Non-Current* (1)	January 1, 2024
Amendments to IAS 1 – *Non-Current Liabilities with Covenants* (2)	January 1, 2024
Amendments to IFRS 16 – *Lease Liability in a Sale and Leaseback* (3)	January 1, 2024
Amendments to IFRS 10 and IAS 28 – *Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*	Undefined

(1) Includes the deferral of the first application of the Amendments to IAS 1 issued on July 15, 2020.
(2) Amendments issued on October 31, 2022.
(3) Amendments issued on September 22, 2022.

The Group is analyzing the potential impact that these regulatory changes may have on its consolidated financial statements, although no significant impacts have been identified to date.

1.3.4 Accounting estimates and judgments

The preparation of interim financial statements calls for estimates and judgments to be made that affect the measurement of recognized assets and liabilities, the presentation of contingent assets and liabilities, and income and expenses recognized over the period. The results may be significantly affected depending on the estimates made.

These estimates are made on the basis of the best information available, as described in Note 3.5 "*Accounting estimates and judgments*" to the consolidated financial statements for 2022. In the first six months of 2023, there were no significant changes in the methodology used for its estimates with respect to those made at the end of 2022, and, except as indicated in Note 3.1 on business combinations, no new significant judgments or estimates have been identified for the preparation of these financial statements.

[2] The standards applied as of January 1, 2023, as adopted by the European Union, are: (i) IFRS 17 – *Insurance Contracts* (including amendments to IFRS 17 issued by the IASB on June 25, 2020); (ii) Amendments to IFRS 17 – *Initial Application of IFRS 17 and IFRS 9 - Comparative Information*; (iii) Amendments to IAS 1 – *Disclosure of Accounting Policies*; (iv) Amendments to IAS 8 – *Definition of Accounting Estimates*; and (v) Amendments to IAS 12 – *Deferred Tax Related to Assets and Liabilities Arising from a Single Transaction.*

(2) SEGMENT INFORMATION[3]

2.1 Changes in the reporting model

In 2023, as a result of its business performance and changes in its organizational structure, Repsol has revised the definition of its reporting segments. The business segment previously known as "*Commercial and Renewables*" is now divided into "*Customer*" (commercial businesses with a customer-focused multi-energy offering) and "*Low-Carbon Generation*" (low-emissions electricity generation and renewables business).

In 2023, following the entry of minority shareholders in the Exploration and Production and the Low-Carbon Generation businesses, Repsol also changed the way in which its results are presented. As of this year, the "*Adjusted income*" of the businesses does not include the share of minority shareholders, so that it fully reflects the income managed by the Company. Along these same lines, minority shareholders are also not taken into account in "*Inventory effect*" or in "*Special items*". The impact of "*Non-controlling interests*" is reflected in a separate line item immediately before "*Net income*".

Repsol has restated the information for 2022 to ensure that the information can be followed and compared.

2.2 Business segments

The segment information disclosed by the Group in this Note is presented in accordance with the disclosure requirements of IFRS 8 – Operating Segments.

The definition of the Group's business segments is based on the different activities performed by the Group and their level of significance, as well as on the organizational structure and the way in which Repsol's management and directors analyze the main operating and financial aggregates in order to make decisions about resource allocation and to assess how the Company is performing.

Repsol's reporting segments are as follows:

- Exploration and Production *(Upstream or "E&P")*: activities for the exploration and production of crude oil and natural gas reserves, as well as the development of low-carbon geological solutions (geothermal, carbon capture, storage and use, etc.).
- Industrial: activities involving oil refining, petrochemicals, and the trading, transport and sale of crude oil, natural gas and fuels, including the development of new growth platforms such as hydrogen, sustainable biofuels and synthetic fuels.
- Customer: businesses involving mobility (service stations) and the sale of fuel (gasoline, diesel, aviation kerosene, liquefied petroleum gas, biofuels, etc.), electricity and gas, and lubricants and other specialties.
- Low-Carbon Generation (LCG): low-emissions electricity generation (CCGTs) and renewable sources.

Corporate and other includes (i) corporate overhead expenses and, specifically, those expenses related to managing the Group, (ii) the financial result, and (iii) intersegment consolidation adjustments.

2.3 Presentation model of the results by segments

In presenting the results and other financial aggregates of its operating segments, Repsol includes the results of its joint ventures (Group reporting model), in accordance with the Group's ownership interest, taking into consideration its operational and economic metrics in the same manner and with the same level of detail as for fully consolidated companies. The Group therefore considers that the nature of its businesses and the way in which results are analyzed for decision-making purposes is adequately reflected.

[3] Some of these figures are classified as Alternative Performance Measures (APMs) in accordance with European Securities and Markets Authority (ESMA) guidelines (for further information, see Appendix I of the interim consolidated management report for the first half of 2023 and www.repsol.com). All information shown in this Note has been reconciled with the IFRS-EU financial statements in Appendix III.

In addition, taking into consideration its business reality and to make its disclosures more comparable with those in the sector, the Group uses a measure of segment profit known as adjusted net income, which corresponds to net income from continuing operations at replacement cost ("Current Cost of Supply" or CCS), net of taxes and without including certain income and expenses ("*Special items*") or income attributable to non-controlling interests ("*Non-controlling interests*"), which are presented separately. The financial result is assigned to "*Adjusted income*" under Corporate and other. More specifically:

- The current cost of supply (CCS), commonly used in this industry to present the results of the Industrial businesses that must work with huge inventories subject to continual price fluctuations, is not an accepted European accounting regulation, yet does enable the comparability with other sector companies as well as the monitoring of businesses independently of the impact of price variations on their inventories. Under income at CCS, the cost of volumes sold during the reporting period is calculated using the procurement and production costs incurred during that same period. Therefore, adjusted income does not include the so-called inventory effect. This inventory effect is presented separately, net of tax and not taking into account the income attributable to non-controlling interests, and corresponds to the difference between income at CCS and that obtained using the weighted average cost approach, which is the method used by the Group to determine its earnings in accordance with European accounting regulations.

- Adjusted income does not include the so-called special items, i.e. certain material items whose separate presentation is considered appropriate in order to facilitate analysis of the ordinary business performance. This heading includes gains/losses on divestments, restructuring costs, asset impairment losses (provisions/reversals), provisions for contingencies and charges, and other relevant income/expenses that do not form part of the ordinary management of the businesses. These results are presented separately, net of tax and not taking into account the income attributable to non-controlling interests.

- Adjusted income also does not include the income attributable to non-controlling interests ("*Non-controlling interests*"), which is presented separately, net of tax.

2.4 Financial information by business segment

The main financial information by business segment is included in this Note and Appendix I. Additional information on the performance of the segments can be found in the accompanying interim consolidated management report for the first half of 2023, which is published together with these interim consolidated financial statements.

Results of the period	*€ Million*

(1) Relates to investments accrued during the period.

2.5 Main new developments in the period

Together with these Interim Financial Statements, Repsol publishes its interim consolidated management report for the first half of 2023 at www.repsol.com, which includes an explanation of the performance of its businesses and the following main new developments of the period:

The global economy has shown to be relatively resilient in the first half of 2023, albeit with low growth. The international backdrop has been marked by monetary policy decisions to address inflation and by ongoing shifts in global tensions as a result of the war in Ukraine. The ***gradual normalization of the energy markets*** and the slow recovery of the Chinese economy have weighed negatively on commodity prices and energy prices. For more information, see section 2. Environment of the interim consolidated management report for the first half of 2023.

The complex, volatile environment has affected the activities and ***results*** of the Company's businesses, but unevenly. The decline in crude oil prices and the sharp drop in gas prices have reduced the revenue of the Exploration and Production segment; Refining margins have cooled significantly throughout the period; and the margins of the Mobility businesses in Spain have recovered since the mandatory discounts imposed by the government in 2022 to cope with the rise in international fuel prices are no longer being applied. For more information, see section 3. Financial performance and shareholder return of the interim consolidated management report for the first half of 2023.

In 2023 the Company continued to make progress towards ***meeting its strategic objectives***, carrying out actions such as the following:

- The sale of a 25% interest in the Exploration and Production business to the EIG group in exchange for $3,350 million was completed (see Note 3.1.4 Equity), which implies a business valuation of $19,000 million. During the period €1,852 million was received (see Note 3.3 Cash flows) and the amounts receivable over the next three years were recognized (Note 3.1.6 Financial assets).

- In the Industrial segment, the transformation of large industrial complexes continued, focusing on the future sustainability of the industry: the Advanced Biofuels Plant (C43) located in Cartagena will start up by the end of 2023, achieving the milestone of being the first plant in Spain specifically designed to produce renewable fuels from lipid waste; construction has begun on the project to expand the Sines Industrial Complex (Portugal); the new maritime terminal at the Outer Port of A Coruña has been inaugurated —facilitating the logistics of new products and raw materials and contributing to the initiative to create a renewable energy hub in A Coruña—.

- In the Customer segment, an innovative program was launched that raises the Company's multi-energy profile with the launch of the "*Connected energy*" program, which benefits customers who arrange energy products with Repsol through Waylet. Digital customers have increased to 6.8 million as of June 30.

- In the LCG business, the acquisition of 100% of Asterion Energies, which manages a portfolio of renewable assets of 7,700 MW located mostly in Spain and Italy, for €576 million is noteworthy of mention (see Note 3.1 Balance sheet). Low-emissions generation capacity has also been increased with the entry into operation of new projects in Chile, United States and Spain.

- Agreements were reached to settle two important lawsuits. In the US, the lawsuit related to Maxus, a company acquired by YPF in 1995, has been settled. In the United Kingdom, Repsol and Sinopec — the current shareholders of the Repsol Sinopec Resources UK (RSRUK) joint venture — reached an agreement, subject to the fulfillment of certain conditions, to settle the arbitration proceedings initiated by Sinopec in relation to the process of acquiring 49% of RSRUK from the Talisman Group in 2012 (see Note 4.1 Disputes). The impact of these settlements is included under "*Non-current provisions*" and "*Current provisions*".

- Shareholder return in the first half of the year stood at €0.35 gross per share in January, for a total of €454 million. In June, a capital reduction was carried out through the redemption of 50 million treasury shares. In July, shareholders were paid a final dividend of €0.35 gross per share, bringing the total to €447 million (see Note 3.1.4 Equity).

For more information, see section 4. Performance of our business of the interim consolidated management report for the first half of 2023.

(3) MAIN CHANGES IN THE FINANCIAL STATEMENTS

This section outlines the most significant changes affecting the headings of the balance sheet, the income statement and the statement of cash flows in the period.

3.1 Balance sheet

Acquisition of Asterion Energies

On February 20, the Company purchased all of the shares of Asterion Energies, S.L. (the parent of the Asterion Energies group) from the European infrastructure fund Asterion Industrial Intra Fund I FCR in order to develop solar projects (ground-mounted, residential rooftop PV and industrial) and wind projects (onshore) located mainly in Spain, France and Italy.

The acquisition cost amounted to €576 million and was paid on February 20, 2023.

Given that the 12-month period since the acquisition has not yet ended, this business combination is recognized on a provisional basis and subject to review in accordance with IFRS 3 "*Business Combinations*"[4].

In accordance with accounting standards, the purchase price of this business combination has been allocated to the assets acquired and liabilities assumed based on their estimated fair values at the acquisition date.

- The fair value of the electricity generation assets (intangible assets and property, plant and equipment) was calculated following an income approach (discounted cash flow considering unobservable market variables). The most sensitive assumptions included in the cash flow projections of the assets are: (i) electricity prices, (ii) probability of project success, (iii) investments and operating costs, and (iv) discount rates. The assets acquired consist of a portfolio of renewable projects in operation and, mainly, under development of 7.7 GW, mostly located in Spain and Italy. The assets and liabilities acquired are reflected in the balance sheet (provisionally) at a net value of €337 million.

- Goodwill is the difference between the acquisition price of the businesses acquired and the fair value of the assets and liabilities recognized, including any deferred taxes arising from differences between the new fair value of the assets acquired and their tax value. The value of the goodwill is justified by the valuation of the businesses acquired, by the value of the know-how to the organization, and by the value of the portfolio of unidentified projects that do not meet the definition of an asset according to the accounting standard. The goodwill initially amounts to €239 million.

To recognize this business combination, Repsol obtained an independent valuation report with a provisional estimate of the acquisition price to be allocated to the assets acquired and liabilities assumed based on their fair value.

The detail of the net assets acquired at February 20, 2023 and the goodwill generated after this acquisition is as follows:

[4] The Group's business combinations are accounted for using the purchase method and require judgements and estimates in the allocation of fair values to the assets acquired and liabilities assumed in the transaction, and in the allocation of the purchase price to these fair values.

	€ Million	
	Fair value	**Carrying amount of the acquired company**
Intangible assets	**416**	—
Property, plant and equipment	144	146
Deferred tax assets	4	4
Other non-current assets	11	10
Other current assets	39	39
Cash and cash equivalents	20	20
Total assets	**634**	**219**
Current and non-current provisions	11	10
Current and non-current financial debt	111	110
Deferred tax liabilities	107	1
Other current liabilities	68	69
Total liabilities	**297**	**190**
NET ASSETS ACQUIRED	337	29
NET ACQUISITION COST	576	
GOODWILL	**239**	

During the period since the acquisition date, the businesses acquired generated €6 million in operating income with a net loss of €-1 million[5].

Transaction costs incurred during the period amounted to €2 million and were recognized under "*Other operating expenses*".

3.1.1 Non-current assets

The increase in "*Intangible assets*" and "*Property, plant and equipment*" compared to December 2022 is mainly explained by the investments made during the period in:

- Exploration and Production, for €1,036 million, most notably in the US (new drilling campaigns for the Marcellus and Eagle Ford production assets —including the Inpex acquisition—, developments in the Gulf of Mexico and the development in Alaska);
- Industrial, for €421 million, mainly in the Refining and Chemicals businesses for maintenance on and improvements to the activities of the industrial complexes;
- Renewables, for €1,313 million[6], as a result of the Asterion Energies business combination described in the previous note and investments for the organic development of projects in the US, Chile and Spain.

In addition, "*Property, plant and equipment*" reflects the reversal of impairment losses on the assets of the refining business in Spain (see Note 3.2.1 Operating income), since the impacts covered by the provision arose in the period.

3.1.2 Investments accounted for using the equity method

Repsol accounts for investments in joint ventures and associates in which it has an interest using the equity method. Note 13 to the consolidated financial statements for 2022 describes the Group's most significant investments. The breakdown of the balance at June 30 is as follows:

[5] If the acquisition had taken place on January 1, 2023, the operating income and net profit contributed would not have been significant for the Group.
[6] In addition, commitments to invest in non-current assets for the installation of wind turbines in Spain were acquired in the first half of the year amounting to €120 million.

Details of investments accounted for using the equity method	*€ Million*	
	Carrying amount of investment [2]	
	06/30/2023	**12/31/2022**
Joint ventures	3,678	3,916
Associates [1]	406	386
TOTAL	**4,084**	**4,302**

[1] Includes mainly the interests in Hecate Energy LLC, Enerkem Inc, Salamanca Infraestruc. LLC, OGCI Climate Investments Llp, and Oleoductos de Crudos Pesados (OCP) Ltd.
[2] In 2023, €3,108 million relates to Exploration and Production (3,383 million at December 31, 2022).

The changes in this heading during the period were as follows:

Investments accounted for using the equity method	*€ Million*	
	06/30/2023	**06/30/2022**
Balance at December 31	**4,302**	**3,554**
Net investments	(68)	8
Changes in the scope of consolidation	(3)	76
Net income (loss) from investments accounted for using the equity method[1]	56	544
Dividends paid[2]	(226)	(301)
Translation differences	(42)	297
Reclassifications and other movements [3]	65	26
Balance at June 30	**4,084**	**4,204**

[1] The drop in revenue in 2023 is mainly due to the Exploration and Production businesses, the income of which was affected by the significant decrease in hydrocarbon prices during the period. This heading does not include "*Other comprehensive income*" amounting to € -64 million at June 30, 2023 (€-60 million for joint ventures and €-4 million for associates) and €275 million at June 30, 2022 (€236 million for joint ventures and €39 million for associates).
[2] In 2023 this relates mainly to Repsol Sinopec Brasil (RSB) and BPTT and in 2022 mainly to RSB, YPFB Andina, S.A. and Sierracol.
[3] In 2023 this includes the restatement of provisions as a result of the equity deficit on the investments in Venezuela.

In relation to the Exploration and Production joint venture with Sinopec in the United Kingdom, it should also be mentioned that on April 28, 2023 the venturers agreed (subject to the fulfillment of certain conditions) to settle the arbitration proceedings in relation to the acquisition by Sinopec of its ownership interest in RSRUK from the Canadian group Talisman, which in turn was acquired by Repsol in 2015 (see Note 4.1 Disputes). Under this agreement Repsol will acquire from Sinopec its 49% shareholding in Repsol Sinopec Resources UK (RSRUK), which will then be wholly owned by the company. Repsol will pay Sinopec a lump-sum consideration of $2,100 million; however, after consolidating the cash available in RSRUK corresponding to the 49% interest acquired, the net cash impact for the Group is estimated to be around $1,100 million. As a result of this transaction and pending the finalization of the agreement, Repsol has adjusted the value of the provision corresponding to the arbitration proceedings, without this having a significant impact on its results.

The acquisition is expected to be completed and the arbitration proceedings settled before the end of 2023.

3.1.3 Financial structure

The determination of the target financial structure takes into account a leverage ratio that ensures the Group's financial strength, defined as the relationship between net debt and capital employed. These ratios, as calculated on June 30, 2023 and December 31, 2022, are detailed below (for more information see section 3.3 Financial position of the interim consolidated management report for the first half of 2023):

Financial structure	*€ Million*	
	06/30/2023	**12/31/2022**
Equity	28,098	25,973
Net financial debt [1]	797	2,256
Capital employed [1]	28,895	28,229
Leverage ratio (%)	**2.8**	**8.0**

[1] Alternative Performance Measures. Regarding the reconciliation of these figures with those established in IFRS-EU, see Appendix I of the interim consolidated Management Report for the first half of 2023.

3.1.4 Equity

Equity	€ Million	
	06/30/2023	**12/31/2022**
Shareholders' equity:	**25,272**	**24,611**
Share capital	1,277	1,327
Share premium and reserves:	20,304	16,750
Share premium	4,038	4,038
Legal reserve	314	314
Retained earnings and other reserves [1]	15,952	12,431
Interim dividends and remuneration	—	(33)
Treasury shares and own equity investments	(7)	(3)
Profit for the year attributable to the parent	1,420	4,251
Other equity instruments	2,278	2,286
Other cumulative comprehensive income	**270**	**683**
Equity instruments at fair value through other comprehensive income	(16)	(15)
Hedging transactions	(129)	(144)
Translation differences	415	842
Non-controlling interests	**2,556**	**679**
TOTAL EQUITY	**28,098**	**25,973**

(1) In 2023 the main changes relate to: (i) the transfer of the profit for the year attributable to the parent for 2022 and (ii) the profit from the sale without loss of control of the 25% interest in the Exploration and Production business (see Note 2.4 Financial information by business segment and "*Non-controlling interests*" of this Note).

Share Capital

The share capital of Repsol, S.A. at June 30 amounted to €1,277,396,053, represented by 1,277,396,053 fully subscribed and paid shares with a par value of €1 each. This reflects the capital reduction carried out in June through the redemption of 50 million treasury shares, as described in this Note under "*Shareholder return*".

In accordance with the most recent information available, the significant shareholders of Repsol, S.A. are:

	% of voting rights attributed to shares		**% of voting rights through financial instruments**	**% of total voting rights**
Significant shareholders	**Direct**	**Indirect**		
BlackRock, Inc.[1]	—	5.306	0.169	5.475
Norges Bank[2]	4.691	—	—	4.691
Banco Santander, S.A.[3]	2.153	—	1.060	3.213
Millennium Group Management LLC[4]	—	—	1.061	1.061

(1) BlackRock, Inc. holds its shareholding through various controlled entities. The information relating to BlackRock, Inc. is based on the statement that it submitted to the CNMV on May 2, 2022 regarding the share capital of 1,527,396,053 shares.
(2) The information relating to Norges Bank is based on the statement that it submitted to the CNMV on July 18, 2023 regarding the share capital of 1,327,396,053 shares.
(3) The information relating to Banco Santander, S.A. is based on the statement that it submitted to the CNMV on June 29, 2023 regarding the share capital of 1,327,396,053 shares.
(4) The information relating to Millennium Group Management LLC is based on the statement that it submitted to the CNMV on July 14, 2023 regarding the share capital of 1,327,396,053 shares.

Treasury shares and own equity investments

The main transactions undertaken by the Repsol Group involving treasury shares[7] were as follows:

[7] The shareholders at the Annual General Meeting held on May 6, 2022 granted authorization to the Board of Directors, for a period of five years, to acquire Repsol shares, whether directly or through subsidiaries, up to a maximum number of shares which, once added to the number of shares already held by Repsol and any of its subsidiaries, does not exceed 10% of the Company's share capital, whereby the price or value of the consideration may not be less than the par value of the shares or exceed their quoted price.

Treasury shares and own equity investments		*€ Million*	
	No. of shares	**Amount**	**% of share capital**
Balance at 12/31/2022	**225,565**	**3**	**0.02 %**
Market purchases (1)	86,170,088	1,240	6.75 %
Market sales (1)	(35,859,749)	(536)	2.81 %
Capital reduction (2)	(50,000,000)	(700)	3.91 %
Balance at 06/30/2023	**535,904**	**7**	**0.04 %**

(1) Includes transactions within the framework of the discretionary treasury share transactions described in the Repsol Group's Internal Code of Conduct as regards the securities market.
(2) Includes the redemption approved by the shareholders at the Annual General Meeting (see "*Shareholder return*" of this Note).

Additionally, there are derivatives on treasury shares described in Note 3.1.7 Derivatives.

Shareholder return

In January 2023, a total of €0.35 gross per share was paid to shareholders, corresponding to: (i) a dividend of €0.325 gross per share charged to voluntary reserves from retained earnings; and (ii) a dividend of €0.025 gross per share charged to profit for 2022. A total of €454 million was paid out.[8]

In addition, the capital reduction approved at the Annual General Meeting for 2023, under item seven on the Agenda, was carried out in June through the redemption of 50 million treasury shares with a par value of €1 each.

In July, a final cash dividend of €0.35 gross per share was paid out with a charge to profit for 2022, for a total of €447 million[7], recognized on June 30 under "*Trade and other payables*" on the balance sheet.

Furthermore, the shareholders at the Annual General Meeting held on May 25 approved the distribution of an additional dividend of €0.375 gross per share charged to unrestricted reserves, to be paid in January 2024, on a date to be determined by the Board of Directors, and was recognized under "*Trade and other payables*".

Lastly, the Board of Directors, at its meeting held on July 26, 2023 and in accordance with the resolution passed at the 2023 Annual General Meeting under item eight on the Agenda, agreed to an additional capital reduction through the redemption of 60 million treasury shares with a par value of one euro each.

Non-controlling interests

The change in "*Non-controlling interests*" relates mainly to the carrying amount of the 25% interest in the assets of the Exploration and Production business after their sale to EIG (see Note 2.4 Financial information by business segment).

3.1.5 Financial resources

Financial Liabilities	*€ Million*	
	06/30/2023	**12/31/2022**
Non-current financial liabilities:		
Non-current financial liabilities	9,993	10,130
Non-current trade derivatives (1)	257	639
Current financial liabilities:		
Current financial liabilities	2,185	3,546
Current trade derivatives (2)	423	718
Total financial liabilities	**12,858**	**15,033**

(1) Recognized under "*Other non-current liabilities*" on the balance sheet.
(2) Recognized under "*Trade and other payables*" on the balance sheet.

[8] Remuneration paid to outstanding shares of Repsol, S.A. conferring the right to receive the dividend.

Key maturities and buybacks in the first half of 2023[9]

The subordinated bond issued by Repsol International Finance B.V. (RIF) on March 23, 2015, for a repurchased nominal amount of €274 million and a fixed coupon of 4.5%, was repurchased and partially redeemed.

The bond issued by Repsol International Finance B.V. (RIF) on May 25, 2021 under the EMTN Program for a nominal amount of €300 million and a variable coupon tied to 3-month Euribor plus 70 basis points was redeemed at maturity.

In addition, Repsol Europe Finance, S.à.r.l. (REF) runs a Euro Commercial Paper (ECP) program, secured by Repsol, S.A. for a maximum of €3,000 million. Commercial paper was issued and redeemed under this program throughout the period, with the outstanding balance at June 30, 2023 being €798 million (€1,532 million at December 31, 2022).

At the date of authorization for issue of these interim consolidated financial statements, the Repsol Group was not in default of any type of obligation that might trigger the early maturity of its financial commitments.

For more information on financial liabilities (including the outstanding balance of obligations and negotiable securities), see Appendix II.

3.1.6 Financial assets

Financial assets	*€ Million*	
	06/30/2023	**12/31/2022**
Non-current assets		
Non-current financial assets[(1)]	2,121	1,437
Non-current trade derivatives [(2)]	57	73
Current assets		
Other current financial assets[(1)]	3,612	3,058
Current trade derivatives[(3)]	190	498
Cash and cash equivalents	5,251	6,512
Total financial assets	**11,231**	**11,578**

(1) The change is mainly explained by the account receivable for the deferred payment of the sale of the 25% interest in the Exploration and Production business.
(2) Recognized under "*Other non-current assets*" on the balance sheet.
(3) Recognized under "*Trade and other receivables*" on the balance sheet.

For more information on financial assets, see Appendix II.

3.1.7 Derivatives

Derivatives on treasury shares

At December 31, 2022, the Group had arranged options on a total of 75 million Repsol shares (50 million from the acquisition of call options and 25 million from the sale of put options). The main characteristics of these options are described in Note 9.2 to the consolidated financial statements for 2022. All options were settled during the first half of 2023 which had an impact of €13 million on the income statement for the first half of the year.

During the first half of 2023, equity swaps were arranged on a total of 35 million shares at an average exercise price of €13.76 per share and with contractual maturity in December 2023 and February 2024. Repsol has the option to settle them through the physical delivery of the shares or by differences. These instruments are measured at fair value with changes recognized under "*Changes in fair value of financial instruments*" in the income statement. The impact on the income statement for the first half of the year amounted to a loss of €15 million. At June 30, 2023, the Group had arranged equity swaps on a total of 35 million shares.

[9] Main redemptions in the first half of 2022: (i) the bond issued by Repsol International Finance B.V. (RIF) in May 2017 (nominal amount of €500 million and a fixed annual coupon of 0.500%) was redeemed at maturity, and (ii) all of the bonds issued by Repsol Oil & Gas Canada Inc. (ROGCI) (nominal amount of $412 million) were repurchased.

3.1.8 Financial risks

As described in Note 10 to the consolidated financial statements for 2022 the Group's activities are exposed to several types of financial risk: market risk, liquidity risk and credit risk. The information at June 30 is updated as follows:

Market risk

Exchange rate risk

The Group's net income and equity are exposed to fluctuations in the exchange rates of the currencies in which it transacts, with the US dollar generating the greatest level of exposure.

The breakdown of the US dollar-euro exchange rate at June 30, 2023 and December 31, 2022 is as follows:

€/$ Exchange rate	June 30, 2023		June 30, 2022		December 31, 2022	
	Closing rate	Accumulated average rate	Closing rate	Accumulated average rate	Closing rate	Accumulated average rate
US dollar	1.09	1.08	1.04	1.09	1.07	1.05

The sensitivity of net income and equity to exchange rate risk, as a result of the effect on the financial instruments held by the Group at June 30, due to the appreciation or depreciation of the euro against the dollar, is illustrated below:

Exchange rate sensitivity	Exchange rate appreciation (+) / depreciation (-)	€ Million 06/30/2023	12/31/2022
Effect on net income after tax	+10%	(2)	(0.4)
	(10)%	2	0.4
Effect on equity	+10%	15	(110)
	(10)%	(12)	90

Interest rate risk

The Group's net income and equity are exposed to fluctuations in interest rates in the markets in which it operates. In response to rising inflation, central banks have decided to tighten monetary policy and therefore raise interest rates. The US Federal Reserve, which began the tightening cycle in March 2022, raised rates to 5.25% at the end of the first half of 2023. The European Central Bank abandoned negative rates in July 2022 and the marginal deposit rate ended the first half of the year at 3.5%. For more information, see section 2. Environment of the interim consolidated management report for the first half of 2023.

The sensitivity of net income and equity, as a result of the effect of fluctuations in interest rates on the financial instruments held by the Group at June 30, is shown in the following table:

Interest rate sensitivity	Increase (+) / decrease (-) in interest rates (basis points)	€ Million 06/30/2023	12/31/2022
Effect on net income after tax	50 b.p.	23	13
	-50 b.p.	(23)	(12)
Effect on equity	50 b.p.	5	1
	-50 b.p.	(6)	(1)

NOTE: The changes at June 30, 2023 have been annualized for financial assets and liabilities.

In connection with the process of transitioning to new benchmark interest rates currently underway in various jurisdictions worldwide, the Group has reviewed the contracts arranged in accordance with the timetable envisaged for the reform, mainly affecting loans and credit facilities. For more information, see Appendix II.

Commodity price risk

At June 30, 2023 a 10% increase or decrease in commodity prices (mainly crude oil, petrochemical products, natural gas and electricity) would have resulted in the following changes in net income and equity as a result of changes in value of the financial derivatives:

Commodities sensitivity	**Increase (+) / decrease (-) in commodity prices**	*€ Million*	
		06/30/2023	**12/31/2022**
Effect on net income after tax	+10%	(31)	(74)
	(10)%	31	74
Effect on equity	+10%	(80)	(136)
	(10)%	81	136

NOTE: A +/-50% change in commodity prices would have an estimated impact of €-153 million and €153 million, respectively, on net income and €-411 million and €432 million, respectively, on equity.

The sensitivity of the derivatives to increases in commodity prices partially offsets the adverse exposure of Repsol's physical operations —in inventories— inherent to its activity.

Liquidity risk

At June 30, 2023, the cash and cash equivalents and the undrawn credit facilities are sufficient to cover short-term debt maturities by 5.3 times (3.8 times at December 31, 2022).

There were also undrawn credit facilities amounting to €2,627 million (€2,382 million at December 31, 2022). At the end of the period, liquidity stood at €11,092 million (€11,575 million at December 31, 2022), including undrawn committed credit facilities.

In an international environment affected by the war in Ukraine, and within the framework of the Group's financial policy, Repsol has ensured the ready availability of funds so as to be able to honor its obligations and see its business plans through to completion, guaranteeing at all times the optimum level of funds and seeking absolute efficiency in the management of these funds.

Credit risk

The Company updated its credit risk management model using economic forecasts for the main countries where it operates, taking into account various factors including the war in Ukraine, without this having a significant impact on the Group's financial statements as a result of the change in the payment behavior of its debtors.

In relation to credit risk on financial instruments relating to operations in Venezuela, see Note 20.3 Geopolitical risks of the consolidated financial statements for 2022, which is updated in Note 4.3 Geopolitical risks of these Interim Financial Statements.

The Group does not have a significant concentration of credit risk on trade receivables (current payables classified under "*Trade and other receivables*" in the balance sheet), since this credit risk exposure is spread out over a large number of customers and other counterparties. The maximum net exposure to a third party after its trade receivables have become impaired, including official bodies and public sector entities, does not exceed 2.4%.

3.1.9 Current assets and liabilities

The balance of "*Inventories*" decreased mainly as a result of the drop in the cost of inventories (lower average price of Brent crude oil -14.1% / €-17/bbl, with higher volumes). This also reflects the net negative impact of the disposal of emission allowances for the metric tons of CO_2 emitted in 2022 and the addition of zero-cost CO_2 allowances received for 2023 (7,589 thousand metric tons at a price of €83.3/tn).

"*Trade and other receivables*" decreased mainly due to lower sales in the Industrial and Customer businesses (see Note 3.2.1 Operating income), impacted by the lower prices of the products sold by the Group.

"*Trade and other payables*" decreased mainly due to less purchases, mainly in the Industrial segment, and was also impacted by the drop in crude oil and gas prices and the cost of energy supplies (see Note 3.2.1 Operating income).

3.2 Income statement

For a detailed explanation of the results for the period, see the interim consolidated management report for the first half of 2023.

3.2.1 Operating net income

Revenue from ordinary activities

Revenue from ordinary activities ("*Sales*" and "*Income from services rendered and other income*") by business segment for the first half of the year is shown below:

€ Million	**06/30/2023**	**06/30/2022**
Exploration and Production	1,615	2,333
Industrial	13,468	19,384
Customer	13,070	15,589
LCG	309	1,025
Total	**28,462**	**38,331**

The significant decline in revenue in the first half of the year is explained by the drop in international crude oil and gas prices, as well as fuel and other derivative products, as a result of the gradual normalization of the energy markets. The following is also noteworthy of mention: (i) the decrease in realization of crude oil and gas prices in the Exploration and Production businesses, (ii) the lower prices of the products sold by the Refining and Chemicals businesses, (iii) the drop in fuel prices in Europe, which affected the Customer businesses (mainly the Mobility business, despite lower discounts[10], and (iv) lower electricity sale prices in Spain, which affected both the LCG business (despite greater production due to the start-up of renewable projects) and the sales businesses in the Customer segment.

The distribution, by country, of revenue from ordinary activities in the first six months of the year is as follows:

€ Million	**06/30/2023**	**06/30/2022**
Spain	16,122	21,634
Peru	2,172	2,468
United States	1,660	2,105
Portugal	1,466	1,672
Other	7,042	10,452
Total [(1)]	**28,462**	**38,331**

(1) The distribution by geographical area has been drawn up based on the markets to which the sales or services rendered are destined, and include the special taxes on the use of hydrocarbons.

[10] In accordance with Royal Decree Law 6/2022, an extraordinary and temporary discount was approved, which was in force from April 1 to June 30 (subsequently extended until December 31, 2022), on the sale price of certain energy products and additives. The Group therefore offered discounts of €0.30 per liter (which included the government discount of €0.20 per liter and an additional discount of €0.10 per liter provided by Repsol on all refueling paid through the Waylet app or using the SOLRED card) and €0.25 per liter (the government discount of €0.20 per liter and an additional discount of €0.05 per liter to other customers). These discounts (effective from March 16 to December 31), not including the discount that is neutral in the Group's income statement, had a negative impact on the revenue of the Mobility business for the first half of 2022. After the government discount ended last December 31, Repsol decided to extend the €0.10 discount through the Waylet app until March 31, 2023

Changes in inventories of finished goods and work in progress

The expense recognized under this heading is explained by the lower prices of both finished products and those in progress of the industrial complexes.

Procurements

In the first half of 2023, the lower costs of "*Procurements*" were mainly due to the lower commodity prices of the industrial complexes.

(Accrual)/Reversal of impairment

In the first half of 2023, net impairment reversals of €322 million were recognized for the Refining business. The impairment loss was reversed as a result of the temporary energy tax accrued in January 2023 (see "*Other operating income/(expenses)*"), which had been considered in the future cash flows of the impairment test for 2022.

The impairment losses recognized in the first half of 2022 amounted to €-1,730 million, which mainly related to impairment losses on the Group's refineries in Spain and Peru and, to a lesser extent, to exploration assets of the Exploration and Production segment and to Mobility assets of the Customer segment.

Transport and freight

The increase in "*Transport and freight*" is the result of higher prices in the freight market.

Supplies

The decrease in "*Supplies*" reflects the lower gas and electricity prices as regards consumption by industrial complexes.

Gains/(loss) on disposal of assets

No significant disposals of assets took place in the first half of 2023.

In the first half of 2022, gains (€47 million) and losses (€-40 million) on disposal of assets related mainly to the sale of production assets in Malaysia (including the interests in the PM3 CAA, Kinabalu and PM305/314 blocks) and in Ecuador (blocks 16 and 67), respectively, of the Exploration and Production segment.

Other operating income/(expenses)

"*Other operating income/(expenses)*" comprises the following items:

Other operating income/(expenses)	*€Million*	
	06/30/2023	**06/30/2022**
Other operating income	819	739
Changes in trade derivative instruments	480	(656)
Other operating expenses:	(3,220)	(2,390)
TOTAL	**(1,921)**	**(2,307)**

In the first half of 2023 "*Changes in trade derivative instruments*" reflects the improved valuation of positions and contracts for activities that involve trading and selling natural gas.

In the first half of 2023, the increase in "*Other operating expenses*" is mainly explained by the temporary energy tax accrued in Spain and the provisions updated to settle lawsuits and arbitration proceedings in the US and the UK (see Note 4.1 Disputes).

As regards the temporary energy tax (see Note 22.1.d) to the consolidated financial statements for 2022): the €444 million corresponding to transactions carried out in 2022 was recognized as an expense on January 1, 2023. The impact on results for the first half of 2023 was mitigated by the reversal of the impairment loss on the Refining business in Spain (see Note 3.2.1 Operating income). In February 2023 Repsol paid €222 million in this regard (50% of the expense incurred in this period).

Repsol considers that the temporary energy tax, in addition to being deeply unjust and harmful, is incompatible with the Spanish Constitution and European Union Law, and has therefore filed an appeal with the Courts requesting its annulment.

3.2.2 Financial results

Repsol's financial result was down on the first half of 2022. The poor valuation of derivatives on treasury shares (see Note 3.1.7 Derivatives) and foreign currency (recognized under "*Changes in fair value of financial instruments*") were mitigated by the exchange gains recognized under "*Exchange gains (losses)*" and gains recognized under "*Net interest*" (due to the returns obtained from the Group's high liquidity and a lower cost of debt -lower volume and cost-).

3.2.3 Income tax

The effective tax rate[11] applicable to income before taxes and before the net income from companies accounted for using the equity method was -37% in the first half of the year (income tax expense of €-891 million). The effective tax rate on this income in the first half of 2022 was -46% (income tax expense of €-1,731 million).

The main new developments as regards tax matters are described below:

- In Brazil, a temporary tax of 9.2% on revenue derived from hydrocarbon exports was approved. This tax was applied between March 1, 2023 and June 30, 2023. In the Repsol Group, this new tax impacts the joint venture with Sinopec.

- In the United Kingdom, following the approval in 2022 of an extraordinary tax on profits obtained from oil and gas production (Energy Profit Levy); applicable rate of 35% for years 2023 to 2028), the government announced the introduction of an Energy Security Investment Mechanism (ESIM) to ensure that if hydrocarbon prices return to normal levels over a certain period of time, the Energy Profit Levy will be removed.

- With regard to the OECD minimum tax (Pillar II), although it is intended to enter into force in 2024, the countries in which the Group has a presence have yet to approve the corresponding legislation. However, several countries have already announced that they will implement this regulation (Spain, Portugal, Luxembourg, Netherlands, Norway, Canada, United Kingdom). Beyond the significant increase in administrative compliance burdens, the Repsol Group does not expect any significant economic impact from the application of this new regulation.

3.2.4 Earnings per share

Earnings per share in the first six months of 2023 and 2022 are detailed below:

EARNINGS PER SHARE (EPS)	06/30/2023	06/30/2022
Profit attributable to the parent (€ million)	1,420	2,539
Adjustment for expenses arising from perpetual subordinated bonds (€ million)	(30)	(30)
Weighted average number of shares outstanding on June 30 (millions of shares)	1,289	1,446
Basic and diluted earnings per share (euros/share)	**1.08**	**1.74**

[11] To estimate the income tax accrued for interim periods, the estimated annual effective tax rate is applied. However, the tax effects resulting from one-off events of transactions in the period are considered as an integral part thereof.

3.3 Cash Flows

In the first half of 2023, cash flows from operating activities amounted to €3,254 million, compared to €2,332 million in the first half of 2022. The increase is due to the reduction in working capital "*Changes in working capital*" due to lower inventory costs (exceptionally high in the first half of 2022 as a result of high inventory prices in the industrial and commercial businesses), partially offset by the drop in revenue as a result of lower hydrocarbon and derivative product prices mainly in the Exploration and Production segment and the Industrial segment.

Cash flows from investing activities reflects a net outflow of €-3,449 million in the period, which highlights the Group's significant investment effort. Payments for investments in property, plant and equipment, intangible assets and investment property (€-1,881 million) increased with respect to the comparative period, reflecting the increase in Exploration and Production investments (most notably including the development of new wells and facilities in Eagle Ford, Marcellus and the Gulf of Mexico in the US), the improvements in the Industrial assets (maintenance and technological upgrades in refineries and petrochemical plants), and the development of renewable projects (Frye Solar, Delta II, etc.). Payments for investments in Group companies and associates (€-828 million) increased considerably and reflect the payments for the acquisition of Asterion Energies (see Note 3.1 Balance sheet) and Inpex Eagle Ford LLC (a company with gas assets in production for Eagle Ford in the US), and the payments for renewable projects in Spain, Chile and the US. Payments for other financial assets (€-1,771 million) are explained by the arrangement of deposits during the period. For more information, see sections 3 and 4 of the interim consolidated management report for the first half of 2023.

In this first half of the year, cash flows from financing activities resulted in a net cash outflow of €-1,080 million compared to € -2,245 million in 2022. This is explained by the net redemption of debt instruments (bonds of Repsol International Finance, see 3.1.5 Financial resources), by the investments in treasury shares (share buyback program and capital reductions) and by debt service and dividend payments (see Note 3.1.4 Equity). These cash outflows were partially offset by the cash obtained from the sale of 25% of the Exploration and Production segment (see Note 2.4 Financial information by business segment).

In short, cash and cash equivalents decreased by €-1,261 million compared to December 31, 2021 to reach €5,251 million, which forms part of the Group's liquidity (see Note 3.1.8 Financial risks).

(4) RISKS

4.1 Disputes

The information provided in this section updates the following disputes set out in Note 15.2 to the consolidated financial statements for 2022:

United States

The Passaic River / Newark Bay lawsuit

The events underlying this lawsuit related to the sale by Maxus Energy Corporation ("Maxus") on September 4, 1986 of its former chemicals subsidiary, Diamond Shamrock Chemical Company ("Chemicals"), to Occidental Chemical Corporation ("OCC"). Maxus agreed to indemnify Occidental for certain environmental contingencies relating to the business and activities of Chemicals prior to the date of the sale. After that (1995), Maxus was acquired by YPF, S.A. ("YPF") and subsequently (in 1999) Repsol, S.A. acquired YPF.

In December 2005, the New Jersey Department of Environmental Protection ("DEP") and the New Jersey Spill Compensation Fund (together, the "State of New Jersey") sued Repsol YPF, S.A. (currently Repsol, S.A., and hereinafter, "Repsol"), YPF, YPF Holdings Inc. ("YPFH"), CLH Holdings ("CLHH"), Tierra Solutions, Inc. ("Tierra"), Maxus and OCC for the alleged contamination caused by the former Chemicals plant which allegedly contaminated the Passaic River, Newark Bay and other bodies of water and properties in the vicinity.

On September 26, 2012 OCC lodged a Second Amended Cross Claim (the "Cross Claim") against Repsol, YPF, Maxus, Tierra and CLHH (together "the Defendants") demanding, among other things, that Repsol and YPF be held liable for Maxus' debts.

On April 5, 2016 the Presiding Judge decided to dismiss OCC's suit against Repsol in full. On June 17, 2016 Maxus filed for bankruptcy with the Federal Bankruptcy Court of the State of Delaware, and also requested the stay of the Cross Claim. On

October 19, 2017, the Presiding Judge upheld Repsol's claim against OCC in full, ordering OCC to pay $65 million plus interest and costs.

On September 14, 2018, Maxus (declared by the Federal Bankruptcy Court of Delaware, the successor to OCC —its main creditor— as the claimant in the Cross Claim) filed an appeal against the ruling handed down in these proceedings and that rejected the claim between Maxus and Repsol. At the same time, OCC filed an appeal against the claim ordering them to pay the $65 million that Repsol had to pay to the State of New Jersey. On December 27, 2021 the Appellate Court upheld the appeals filed by OCC. The ruling did not find Repsol to be liable, but rather only remands the case to the Trial Court as it considers that a Summary Judgment could not be granted in this stage of the proceeding.

On June 14, 2018, the Maxus Liquidating Trust filed a New Claim in the Federal Bankruptcy Court of the State of Delaware against YPF, Repsol and certain subsidiaries of both companies for the same claims as those contained in the Cross Claim.

On April 6, 2023, Repsol and YPF reached a settlement agreement that put an end to all outstanding lawsuits related to Maxus (the company acquired by YPF in 1995), paying a total amount of $575 million, which is divided in half between Repsol and YPF. This expense was recognized under "Other operating expenses" in the income statement with a credit to "Current provisions" in the balance sheet.

The agreement includes the arrangements reached with YPF, the Maxus Liquidating Trust, Occidental Chemical Corporation, the Environmental Protection Agency (EPA), the National Oceanic and Atmospheric Administration (NOAA) and the U.S. Department of the Interior, as well as with the States of Ohio and Wisconsin. By virtue of these agreements, Repsol obtains the waiver of actions by the various signatories and additional protections with respect to potential future actions by third parties.

These agreements are subject to court approval, which is expected to be granted in the coming months, and allow for a definitive end to all outstanding lawsuits related to Maxus.

United Kingdom

Addax arbitration in relation to the purchase of Talisman Energy UK Limited (TSEUK)

On July 13, 2015, Addax Petroleum UK Limited ("Addax") and Sinopec International Petroleum Exploration and Production Corporation ("Sinopec") filed a Notice of Arbitration against Talisman Energy Inc. (currently "ROGCI") and Talisman Colombia Holdco Limited ("TCHL") in relation to the purchase of 49% of the shares of TSEUK (currently Repsol Sinopec Resources UK Limited "RSRUK"). On May 25, 2016, Addax and Sinopec formalized the arbitration claim, in which they requested that, in the event that their claims are upheld in full, they be paid the amount of their initial investment in RSRUK, materialized in 2012 through the purchase of 49% of this interest from TCHL, a wholly-owned subsidiary of ROGCI, together with any additional investment, past or future, in such company, as well as any loss of opportunity that could have occurred, which is estimated to be a total figure of approximately $5,500 million.

The dispute relates to events that took place in 2012, prior to Repsol's acquisition of Talisman in 2015 and that does not involve any actions by Repsol.

ROGCI and TCHL asked the Arbitral Tribunal to dismiss the claims of Addax and Sinopec based on contractual guarantees. On August 15, 2017, the Arbitral Tribunal issued a First Partial Award dismissing the claims of Addax and Sinopec based on the contractual guarantees.

The Arbitral Tribunal decided, among other procedural matters, to split the procedure into two phases: the first addressing liability and the second dealing with the amount of any liability found that, where appropriate, would have been determined.

The five main matters in dispute are Reserves, Production, Abandonment, Projects and Maintenance.
On January 29, 2020, the Arbitral Tribunal issued its Second Partial Award on Reserves, determining that ROGCI and TCHL are liable to Sinopec and Addax with regard to this matter.

On April 20, 2021 the Arbitral Tribunal issued a Third Partial Award with regard to the remaining issues pending to be decided in the liability phase, whereby it declared that TCHL and ROGCI were liable for the matter related to Production — which overlaps with what was already decided in the previous award on Reserves — and dismissed the claims of Addax and Sinopec regarding the remaining matters (Abandonment, Projects and Maintenance).

On January 31, 2023, the SICC issued a judgment dismissing the appeals for annulment filed against the Second Partial Award and the Third Partial Award.

The Third Partial Award dismissed most of the claims of Addax and Sinopec and allowed for a better estimate of the liabilities that could arise from this lawsuit. Therefore, a new assessment has been carried out of the provision necessary to cover the corresponding risks and, as a result of the analysis performed by the company and its lawyers and external advisors, the provision initially recognized has been reduced.

In addition, on November 30, 2017 Repsol, S.A. commenced arbitration proceedings against China Petroleum Corporation and TipTop Luxembourg S.A.R.L (Sinopec Group companies) seeking relief from any adverse ruling on the arbitration mentioned above together with other damages yet unquantified. The Tribunal dismissed Repsol's claim in 2021, however, this decision did not have any impact on the risk assessment and the accounting provision for the Addax arbitration.

The next step in the arbitration proceedings is the quantification phase, which is not expected to be resolved until at least the fourth quarter of 2023.

However, on April 28, 2023 Repsol and Sinopec agreed that, subject to the fulfillment of certain conditions, Repsol will acquire from Sinopec its 49% interest in the shares of RSRUK (see Note 3.1.2 Investments accounted for using the equity method) and settle the arbitration proceedings. Therefore, Repsol and Sinopec suspended the arbitration proceedings on this same date. The total consideration for the agreement is $2,100 million. As of the date of publication of these Interim Financial Statements, the shares are expected to be transferred and the arbitration proceedings settled before the end of 2023.

Peru

Following the oil spill on January 15, 2022 at the facilities of the La Pampilla Refinery in Peru, which took place as a result of an uncontrolled movement of the Mare Doricum while unloading crude oil from the vessel (see Note 4.4 Environmental risks), at the end of August, leave to be heard was granted for the civil lawsuit for damages filed by the National Institute for the Defense of Competition and the Protection of Intellectual Property of Peru (INDECOPI) against Repsol, S.A., Refinería La Pampilla, S.A.A. (RELAPASAA), Repsol Comercial, S.A.C (RECOSAC), and the insurance company Mapfre, as well as the shipping companies Fratelli d'amico Armatori and Transtotal Marítima, as operators of the ship, requesting compensation of $4,500 million for liabilities in the oil spill, of which $3,000 million would correspond to direct damages and $1,500 million to pain and suffering caused to consumers, users and third parties allegedly affected by the spill.

The notice of the lawsuit has not yet been served on Repsol, S.A., Mapfre Spain or the shipowners in Italy as it follows a consular notification that normally takes few months.

Meanwhile, RELAPASAA, RECOSAC and Mapfre Perú have presented their defenses in form and substance in a timely manner, filing appeals for annulment against the order for admission of the lawsuit based on its lack of due cause, failure to rectify the defects in the suit initially indicated by the judge, lack of prior settlement proceedings by INDECOPI and lack of identification of the claimants, as well as improper accumulation of petitions. These three entities have presented their formal defenses, pleading as follows: that INDECOPI does not have the right to demand payment; that there are transactions with a growing number of people affected by the spill, as recorded in the Register prepared by the Peruvian Government; that INDECOPI's representation is defective; that the Repsol Group companies and their insurance companies against which the lawsuit is filed do not have legal standing to be defendants; and that any potential civil liability resulting from the spill depends on the outcome of ongoing investigations. Finally, they have also formalized their substantive defenses regarding non-contractual civil liability based on the lack of foundation for the amounts claimed, among other arguments.

Although the lawsuit filed by INDECOPI may entail a long process, Repsol reaffirms its assessment that, according to the criteria of the external lawyers and in view of all the opposing arguments put forward, the Peruvian Courts will finally dismiss the lawsuit, and therefore considers it a remote risk.

Also in relation to the spill on January 15, 2022, the Association of Persons Affected by Repsol ("the Association")) has filed a lawsuit against RELAPASAA and the insurance company Mapfre Perú, claiming 5,134 million soles (around €1,273 million) in favor of 10,268 allegedly affected persons. On November 30, 2022, RELAPASAA was served notice of this lawsuit. RELAPASAA has presented the formal and substantive defenses regarding this lawsuit in a timely manner within the corresponding deadlines, and has filed an appeal for annulment against the order for admission of the lawsuit based on improper accumulation of claims, as well as formal defenses pleading that the Association does not have the standing to bring the lawsuit on behalf of the alleged affected individuals and lack of proper identification of those individuals. Finally, the company has also formalized its substantive defense regarding non-contractual civil liability based on the lack of foundation for the amounts claimed, among other arguments. In an attempt to correct various observations made by the Judge (in which it was requested to present itemized information on the facts that gave rise to the damage and the harm and loss suffered by each of the affected persons), the Association modified the claim, reducing its request for compensation to 21.9 million soles (approximately €5.2 million) and involving only 353 members. On April 13, 2023, the competent judge rejected the claim, among other reasons, because the Association was unable to provide itemized proof of the alleged damage for each claimant as required by Peruvian law. The Association appealed this decision, which was later ratified by the higher court on June 9, confirming the ruling that rejected the claim. The ruling handed down by the courts of second instance was not challenged by the Association within the legal period and, therefore, the Court is expected to issue a ruling to definitively close the case in the next few days. Once the case is closed, it will no longer be classified as a contingency for RELAPASAA.

As a result of the spill, various Peruvian regulatory bodies (including the Environmental Assessment and Control Agency (OEFA), Supervisory Agency for Investment in Energy and Mining (OSINERGMIN), General Directorate of Captaincies and Coast Guard (DICAPI), National Service of Natural Protected Areas by the State (SERNANP), National Forestry and Wildlife Service (SERFOR) have initiated sanctioning administrative procedures against RELAPASAA against which the corresponding defenses have been presented, in addition to meeting the requirements of the authorities mentioned. Most of these administrative sanctioning procedures are still in force and their outcome will depend on the conclusions reached from the ongoing investigations.

4.2 Government and legal proceedings with tax implications

The information contained in Note 22.4 to the consolidated financial statements for 2022 is updated below, with the following new developments:

- In Spain, there are no open lawsuits or pending tax charges in relation to corporation tax for 2007 to 2009, since the Spanish tax authorities have handed down all favorable rulings (transfer pricing, tax credits for losses on foreign investments and R&D tax credits).
- In Brazil, Repsol Sinopec Brasil, S.A. received unfavorable rulings on the lawsuits in which it was required to pay PIS/COFINS and CIDE[12] for 2009 and 2011 for payments to foreign companies related to charter contracts for exploration platforms. These rulings may be appealed.
- In Canada, the tax authorities completed the corporation tax audit for 2017 with no material adjustments.
- In the US, notice was received that tax audit of Repsol Oil&Gas USA, LLC. was completed with no proposed adjustment for corporation tax for 2019.

4.3 Geopolitical risks

The information in this section updates the content of Note 20.3 to the consolidated financial statements for 2022.

Russia's invasion of Ukraine

Repsol has no equity exposure or significant commercial position in Russia following the divestment of all its assets in this country in 2021. However, Repsol is exposed to indirect risks (described in Note 20.3 to the consolidated financial statements for 2022) arising from the new macroeconomic scenario marked by the war.

[12] CIDE: Contribuiçào sobre Intervençào no Dominio Econômico (Contribution on Economic Activities), PIS: Programa de Integraçào Social (Social Integration Program) and COFINS: Contribuiçào para o financiamento da seguridade social (Contribution for Social Security Financing).

Venezuela

The political and economic situation[13] has continued in 2023. However, the outlook has improved somewhat following the incipient easing of the US Government's coercive measures[14] against Venezuela.

Repsol continues to adopt the necessary measures to continue its activities in Venezuela in full compliance with applicable international sanctions, including US policies in relation to Venezuela, and is constantly monitoring changes and developments and, therefore, the possible effects they may have on such activities.

Repsol's total equity exposure[15] to Venezuela at June 30, 2023 amounted to €327 million (€411 million at December 31, 2022), mainly comprising the financing extended to the Venezuelan subsidiaries.

Average net production in Venezuela in the first half of the year was 60.8 thousand barrels of oil equivalent per day (57.5 thousand barrels of oil equivalent per day during the same period in 2022).

Bolivia

The political and economic situation has continued in 2023. Repsol's equity exposure in Bolivia at June 30, 2023 amounted to €493 million, comprising mainly the value of productive assets — property, plant and equipment — and the value of the investment accounted for using the equity method at that date (€504 million at December 31, 2022).

Average net production in Bolivia in the first half of the year was 32.7 thousand barrels of oil equivalent per day (32.8 thousand barrels of oil equivalent per day during the same period in 2022).

Algeria

Repsol's equity exposure in Algeria at June 30, 2023 was around €406 million and mainly includes property, plant and equipment at that date (€437 million at December 31, 2022).

Average net production in Algeria in the first half of the year was 10.9 thousand barrels of oil equivalent per day (12.9 thousand barrels of oil per day during the same period in 2022).

Libya

The political instability has continued in 2023. There were no significant interruptions to production in the first half of 2023 as a result of safety conditions. Repsol's net production of crude oil in the first half of 2023 was 32.4 thousand barrels of oil per day (24.3 thousand barrels of oil per day during the same period in 2022).

Repsol's equity exposure in Libya at June 30, 2023 was around €435 million and mainly includes property, plant and equipment at that date (€337 million at December 31, 2022).

4.4 Environmental risks

On January 15, 2022, an oil spill occurred at the Multiboyas Terminal No. 2 facilities in the Pampilla, S.A.A. refinery while crude oil was being unloaded from the Mare Doricum, due to an uncontrolled movement of the vessel.

The first response cleanup actions were completed on April 13, 2022 and were carried out with the help of nearly 3,000 workers, more than 140 pieces of heavy equipment, 38 skimmers, nearly 100 vessels of various sizes, more than 11,000 meters of containment booms and absorbent material, 18 satellites and more than 400 geo-referenced photographs taken on a daily basis. In addition, a system for predicting and monitoring the movement of the hydrocarbons was put in place.

[13] The Venezuelan bolivar fell heavily against the euro in the first half of the year (€30.575/BsS vs. €18.694/BsS at December 31, 2022), though with no significant impact on the Group's financial statements, since the functional currency of its subsidiaries in the country is mainly the US dollar.

[14] The OFAC's issuance of General Licenses 41 and 8K appears to be linked to progress at the negotiating table between the Venezuelan government and the opposition. The coercive measures are expected to be gradually reduced if these negotiations are successful.

[15] Equity exposure relates to the value on the Group's balance sheet of consolidated net assets exposed to risks specific to the countries for which they are reported.

Daily monitoring and additional cleaning actions continue to be carried out throughout the area, both at sea and on land, which are reported to the corresponding authorities on a daily basis.

The physical, chemical and hydrobiological monitoring carried out by the Company has shown that the sea and the accessible beaches have been complying with the strictest environmental standards for months and, therefore, do not represent any risk to health or the environment. These reports were drawn up by accredited laboratories and all updates have been submitted to the corresponding authorities, with the most recent complete report on the status of the affected areas submitted in April 2023.

Work is currently underway on the Rehabilitation Plan required by the authorities, which will be delivered on schedule (until October 2023).

Regarding local communities, it should be noted that to date more than 9,900 people, out of a total of 10,300 beneficiaries included on the list prepared by the government, have agreed to and received full compensation, i.e. more than 95% of those on the list.

The main expenses from the incident were already recognized in the income statement for 2022. At June 30, the costs payable amounted to $128 million. These payments may vary due to various circumstances affecting the progress made towards the planned activities, and developments in the administrative sanctioning procedures, the outcome of which will depend on the conclusions of investigations still in progress.

Repsol has insurance policies in place that provide coverage related to the consequences of this event, and is currently coordinating the actions to be followed with the experts (adjusters) appointed by the insurance companies. A total of $62 million have been collected from these insurance companies in 2023.

Without prejudice to the actions that may be taken against the party responsible for the spill, Refinería La Pampilla, S.A.A. has reaffirmed its commitment to continue mitigating and remedying the effects of the spill, while working with the authorities and affected communities, and disclosing information to the public with the utmost transparency. The company has stated its intent to develop sustainable social projects to contribute to the economic recovery in the affected areas. Social aid projects are being implemented in these areas.

The corporate insurance policies, subject to their terms and conditions, cover civil liability for pollution on land and at sea, for some countries and activities, and certain liabilities to the authorities under the Environmental Liability Act, all resulting from accidental, sudden and identifiable events, in line with customary industry practices and applicable legislation.

For additional information on ongoing lawsuits arising from the spill see 4.1 Disputes and for more information on the environmental impacts of the spill and mitigation actions see section 5. Sustainability and corporate governance of the interim consolidated management report for the first half of the year.

(5) SUBSEQUENT EVENTS

No significant events have occurred since the end of the interim period.

(6) EXPLANATION ADDED FOR THE TRANSLATION INTO ENGLISH

These interim consolidated financial statements are prepared on the basis of the IFRS, as endorsed by the European Union, and Article 12 of Spanish Royal Decree 1362/2007. Consequently, certain accounting principles applied by the Group may not conform to other generally accepted accounting principles in other countries.

APPENDIX I. MAIN CHANGES IN THE COMPOSITION OF THE GROUP

The companies that comprise the Repsol Group are set out in Appendix I of the 2022 consolidated financial statements. The main changes in the composition of the Group during the first six months of 2023 are as follows:

a) Business combinations, other acquisitions and increased interests in subsidiaries, joint ventures and/or associates:

					06/30/2023

APPENDIX II. OTHER DETAILED INFORMATION

Financial instruments

Financial assets

The breakdown of the Group's financial assets, by asset type, is as follows:

Detail of financial assets	**June 30, 2023 and December 31, 2022**							
	At fair value through profit or loss		**At fair value through other comprehensive income**		**At amortized cost** [4]		**Total**	
€ Million	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**
Equity instruments [1]	25	26	56	56	—	—	81	82
Derivatives	51	59	20	18	—	—	71	77
Loans	—	—	—	—	1,038	965	1,038	965
Time deposits	—	—	—	—	428	355	428	355
Other financial assets	29	22		—	531	9	560	31
Non-current	**105**	**107**	**76**	**74**	**1,997**	**1,329**	**2,178**	**1,510**
Derivatives	225	845	62	149	—	—	287	994
Loans	—	—	—	—	9	67	9	67
Time deposits	—	—	—	—	3,128	2,480	3,128	2,480
Cash and cash equivalents [2]	4	4	—	—	5,247	6,508	5,251	6,512
Other financial assets	102	1	—	—	276	14	378	15
Current	**331**	**850**	**62**	**149**	**8,660**	**9,069**	**9,053**	**10,068**
TOTAL [3]	**436**	**957**	**138**	**223**	**10,657**	**10,398**	**11,231**	**11,578**

[1] Includes non-controlling financial investments in certain companies over which it does not have management influence.
[2] Corresponds mainly to liquid financial assets, deposits or liquid financial investments needed to meet payment obligations in the short term that can be converted into a known amount of cash within a period usually shorter than three months and that are subject to an insignificant risk of changes in value.
[3] Does not include "*Other non-current assets*" and "*Trade and other receivables*" in the consolidated balance sheet, which at June 30, 2023 and December 31, 2022 amounted to €843 million and €766 million non-current, and €7,631 million and €8,529 million or current assets, respectively, for trade receivables net of their corresponding provisions for impairment.
[4] Items that do not bear explicit interest are recognized at their nominal value whenever the effect of not discounting the related cash flows is not significant.

Financial liabilities

The breakdown of the Group's financial liabilities, categorized by liability type, is as follows:

Financial Liabilities	**June 30, 2023 and December 31, 2022**									
	At fair value through profit or loss [1]		**At fair value through other comprehensive income** [1]		**At amortized cost**		**Total**		**Fair value** [1]

XS2361358539 [1] [5]	Repsol Europe Finance, S.à.r.l.	Jul-21	Euro	600	0.875%	Jul-33	LuxSE

Note: Does not include perpetual subordinated bonds, which qualify as equity instruments (see Note 6.4 Other equity instruments to the consolidated financial statements for 2022), issued by RIF in June 2020 and March 2021 for an outstanding nominal amount at December 31 of €1,500 million and €750 million, respectively.

(1) Issues made under the EMTN Program, secured by Repsol, S.A. and for a maximum of €13,000 million.
(2) Subordinated bond (does not correspond to any open-ended or shelf program) with a coupon that will be revised on March 25, 2025 and March 25, 2045.
(3) LuxSE (Luxembourg Stock Exchange). Multilateral trading facilities or other trading centers or non-official OTC markets are not considered.
(4) Bond linked to a target of a 12% reduction in the Carbon Intensity Indicator (CII) by 2025. If the Group fails to meet these targets, the coupon on the bonds will be increased by 0.25% (payable in 2027, 2028 and 2029).
(5) Bond linked to a target of a 25% reduction in the CII by 2030. If the Group fails to meet these targets, the coupon on the bonds will be increased by 0.375% (payable in 2032 and 2033). For information on the performance of the CII, see section 6.1 Energy transition and climate change of the consolidated management report for 2022 and the CII verification report (available at www.repsol.com).

Fair value of financial instruments

The financial instruments recognized at fair value in the Interim Financial Statements at June 30, 2023 and December 31, 2022 are classified as follows:

Fair value of financial liabilities	**June 30, 2023 and December 31, 2022**							
	Level 1		**Level 2**		**Level 3**		**Total**	
€ Million	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**
At fair value through profit or loss	284	366	233	461	60	377	577	1,204
At fair value through other comprehensive income	12	1	—	73	251	396	263	470
Total	**296**	**367**	**233**	**534**	**311**	**773**	**840**	**1,674**

The reconciliation between the opening and closing balances of financial liabilities classified as level 3 is as follows:

€ Million	**06/30/2023**
Opening balance	773
Income and expenses recognized in the income statement	(317)
Income and expenses recognized in equity	(145)
Closing balance	**311**

NOTE: None of the foreseeable scenarios of the assumptions used would result in significant changes in the fair value of the instruments classified under level 3 of the fair value hierarchy.

Fair value of financial assets	**June 30, 2023 and December 31, 2022**							
	Level 1		**Level 2**		**Level 3**		**Total**	
€ Million	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**
At fair value through profit or loss	89	256	187	647	160	54	436	957
At fair value through other comprehensive income	32	83	39	28	67	112	138	223
Total	**121**	**339**	**226**	**675**	**227**	**166**	**574**	**1,180**

The reconciliation between the opening and closing balances of financial assets classified as level 3 is as follows:

€ Million	**06/30/2023**
Opening balance	166
Income and expenses recognized in the income statement	6
Income and expenses recognized in equity	(45)
Reclassifications and other	100
Closing balance	227

NOTE: None of the foreseeable scenarios of the assumptions used would result in significant changes in the fair value of the instruments classified under level 3 of the fair value hierarchy.

No financial instruments were transferred between levels of the fair value hierarchy during the first half of the year. For more information on the calculation methodology and the levels of the fair value hierarchy, see Note 8.2 to the consolidated financial statements for 2022.

Interest rate reform

Repsol has reviewed the arranged contracts according to the schedule set for the reform, which mainly affects loans and credit facilities.

In connection with the process of transitioning to new benchmark interest rates in various jurisdictions worldwide, the Group has reviewed the contracts arranged in accordance with the timetable envisaged for the reform, mainly affecting loans and credit facilities. The new contracts include reference to risk free rates and, in any case, specific clauses are included to regulate the event of permanent discontinuation. All contracts that were tied to GBP Libor have transitioned to the new corresponding rate (SONIA), the discontinuation date of which was December 31, 2022. In relation to contracts tied to USD Libor, the discontinuation date of which was June 30, 2023, the transition to the corresponding new rate (SOFR) will take place on July 1, 2023.

This reform has not led to any change in the Group's interest rate financial risk management policy.

The main financial assets and liabilities tied to LIBOR rate as at June 30, 2023, in which the interest rate is a main element of the contract, are detailed below:

	06/30/2023
€ Million	Amount /Notional
Financial assets [(1)]:	
USD LIBOR	887
Financial liabilities [(2)]:	
USD LIBOR	386

NOTE: Does not include assets and liabilities of a commercial nature.
[(1)] Includes mainly current accounts, deposits and loans, net of impairment, tied to financing in Venezuela (see Note 8 Financial assets to the consolidated financial statements for 2022).
[(2)] Includes mainly loans.

Related party transactions

Repsol carries out transactions with related parties on an arm's length basis. The transactions between Repsol, S.A. and the Group companies, and between them, form part of the Company's normal business activities in terms of their purpose and conditions.

At June 30, 2023, for the purpose of presenting this information, the following are considered to be related parties:

a. Directors and executives: includes members of the Board of Directors and members of the Executive Committee, who are considered "executives" for the purpose of the following section (see "*Remuneration of the members of the Board of Directors and executives*").

b. People, companies or entities within the Group: includes the transactions with Group companies or entities that are not eliminated in the consolidation process, corresponding mainly to transactions performed with companies accounted for using the equity method (see Note 13. Investments accounted for using the equity method to the consolidated financial statements for 2022).

Revenue, expenses and other transactions and balances with related parties at June 30 are as follows:

Revenue and expenses	**06/30/2023**				**06/30/2022**

(1) Includes any transactions performed with executives and directors not included in the following section "*Remuneration to members of the Board of Directors and executives*", which correspond to the outstanding balance at the reporting date of the loans granted to members of senior management and the corresponding accrued interest, as well as dividends and other remuneration received as a result of holding shares of the Company.
(2) "*People, companies or entities within the Group*" primarily includes products purchased with Repsol Sinopec Brasil (RSB) and Iberian Lube Base Oil, S.A. (ILBOC) amounting to €460 million and €102 million in 2023 and €607 million and €132 million in 2022, respectively.
(3) Includes mainly provisions for credit risks of accounts receivable and financial instruments.
(4) In 2023 and 2022, "*People, companies or entities within the Group*" includes mainly sales of products to Iberian Lube Base Oil, S.A. (ILBOC) and the Dynasol Group for €182 million and €57 million in 2023 and €295 million and €91 million in 2022.
(5) Includes loans granted and new drawdowns on credit facilities in the period, as well as capital contributions to Group companies with companies accounted for using the equity method.
(6) Includes primarily guarantees granted to joint ventures in the United Kingdom, issued in the ordinary course of business to cover obligations to dismantle offshore platforms in the North Sea.
(7) Corresponds to purchase, investment or expense commitments acquired in the period.
(8) In 2022 the amounts recognized under "*Dividends and other profits distributed*" include the amounts relating to the cash dividend paid in January 2022; and in 2021 the amounts corresponding to the sale to Repsol, at the guaranteed fixed price, of the bonus issue rights arising from the capital increase through the issue of bonus shares finalized in January 2021, in the framework of the "*Repsol Flexible Dividend*" remuneration program.
(9) In 2023 and 2022, "*People, companies or entities within the Group*" includes mainly the repayment and/or cancellation of guarantees and/or loan provided to joint ventures in the UK and financing agreements.

Remuneration of the members of the Board of Directors and executives[16]

The information in this section updates the content of Notes 28 and 29 to the consolidated financial statements for 2022.

During the first half of 2023, a total of 15 people sat on the Board of Directors and 10 people on the Executive Committee.

The table below details the remuneration accrued during the first half of 2023 by the people who, at some point during the six-month period and during the time they held such positions, were members of the Board of Directors, and by the people who, for the same period and with the same criterion, were members of the Executive Committee.

Directors	*€ Thousand*	
	06/30/2023	**06/30/2022**
Remuneration for membership of the Board and/or Board committees	3,392	3,397
Wages	600	600
Variable remuneration in cash	991	908
Share-based remuneration systems	350	308
Long-term savings systems (1)	127	127
Other items (2)	159	150
Total remunerations received by the directors	**5,619**	**5,490**
Total remunerations received by the executives (3)(4)(5)(6)	**7,173**	**6,799**

(1) Corresponds to the contributions to pension plans and savings plans for executives.

[16] For reporting purposes in this section, Repsol considers "executives" to be the members of the Executive Committee. This definition of executives, made purely for reporting purposes, neither substitutes nor comprises a benchmark for interpreting other concepts regarding senior management applicable to the Company under prevailing legislation (e.g. Royal Decree 1382/1985), nor does it have the effect of creating, recognizing, amending or extinguishing any existing legal or contractual rights or obligations.

(2) Includes the accrued cost of the retirement, disability, and life insurance policies for Board members, including that corresponding prepayments amounting to €15 thousand in the first half of 2023 (€14 thousand in the first half of 2022).
(3) Includes contributions to pension plans, contributions to savings plans ,and life and accident insurance premiums (the latter of which includes the corresponding prepayments) totaling €518 thousand (€616 thousand in 2022).
(4) Does not include executives who are also directors of Repsol, S.A., who are instead included in the remuneration paid to directors.
(5) Includes the settlement of outstanding long-term incentive programs as consideration for the non-compete covenant.
(6) Includes the amounts recognized for termination benefits and non-compete clauses, which amounted to €2.3 million at June 30, 2023.

Share Purchase Plan for Beneficiaries of the Long-Term Incentive Programs and Plans for Share Acquisition and Purchase for employees

i) "Share Purchase Plan for Beneficiaries of the Long-Term Incentive Programs (LIP)"

A total of 229 employees and executives were included in the thirteenth cycle of the 2023-2026 Plan, acquiring a total of 159,514 shares on June 23, 2023, at an average price of €13.0146 per share. In addition, the 10,845 shares delivered to the CEO as a partial payment of the 2019-2022 Incentive Program have been included in the calculation of the expected investment in this current Share Purchase Plan for the Beneficiaries of the Long-Term Incentive Programs. Therefore, a total of 170,359 shares were included under this Plan. Thus, the maximum commitment to deliver shares under the thirteenth cycle of the Plan, by the Group to those employees who meet the relevant requirements after the three-year vesting period, amounts to 56,716 shares. The current members of the Executive Committee are set to acquire a total of 48,023 shares in this thirteenth cycle.

In addition, the vesting period for the tenth cycle of the Plan was completed on May 29, 2023. As a result, 196 beneficiaries of this cycle vested rights to a total of 87,451 shares (receiving a total of 65,690 shares after deducting the personal income tax withholdings to be made by the Company). The members of the Executive Committee, together with the other Executive Directors, vested rights to 28,804 shares (after deducting the income tax prepayment made by the Company, they received a total of 19,688 shares).

ii) "Share Acquisition Plan"

During the first half of 2023, the Group purchased 443,819 treasury shares for €6,283,635.15, which were delivered to employees. In accordance with the terms and conditions of the Plan, the members of the Executive Committee acquired a total of 1,826 shares during the first half of the year.

iii) "Global Share Purchase Plan to reward employees: TU REPSOL"

In 2020, the TU REPSOL Plan was launched, whereby all employees could set aside part of their remuneration to purchase shares in the Company and receive one bonus share for every two shares initially acquired, provided the shares were held for two years and the employees continued to meet the other terms and conditions of the Plan.

In February 2023, once the 2-year period had elapsed, the corresponding bonus shares were delivered to the beneficiaries.

In 2020, the current members of the Executive Committee acquired a total of 1,078 shares under the TU REPSOL Plan. Under the terms of the Plan, these shares entitled them to receive a total of 539 shares in February 2023 (they received 524 shares once withholdings were discounted).

The shares to be delivered under plans i), ii) and iii) above may be taken from Repsol's direct or indirect treasury shares, newly issued shares or via third parties with whom agreements are entered into to ensure satisfaction of the commitments assumed.

Average headcount

The average headcount at June 30, 2023 and 2022 can be seen below:

Average headcount	**06/30/2023**	**06/30/2022**
Men	14,625	14,343
Women	9,474	9,123
Average headcount	**24,099**	**23,466**

APPENDIX III. SEGMENT INFORMATION AND RECONCILIATION WITH IFRS-EU FINANCIAL STATEMENTS

The reconciliation of adjusted net income/(loss) to IFRS-EU net income/(loss) for the first half of 2023 and 2022 is as follows:

Income	First half

REPSOL Group

Management Report 1st Half 2023

Translation of a report originally issued in Spanish. In the event of a discrepancy, the Spanish language version prevails

The Repsol Commitment
Net Zero Emissions
by 2050

REPSOL

The company

Repsol's ***mission*** (its reason for being) is to provide energy to society in an efficient and sustainable way.

Our ***vision*** (where Repsol is heading) is to be a global energy company that relies on innovation, efficiency and respect to create sustainable value in the service of societal progress.

Repsol has laid down ***principles of action*** —Efficiency, Respect, Anticipation and Value Creation— and company behaviors —Results Orientation, Accountability, Cooperation, Entrepreneurial Attitude and Inspiring Leadership— to make this mission a reality and our vision an attainable challenge.

Further information available at www.repsol.com.

The Management Report

The ***Interim Management Report*** of the Repsol Group[1] should be read in conjunction with the consolidated Management Report for 2022. In conjunction with this report, Repsol has published condensed interim consolidated financial statements for the first half of 2023 (hereinafter, "1H23 interim financial statements"). The Board of Directors of Repsol, S.A. approved both reports of Repsol, S.A. at its meeting of July 27, 2023.

Report information

The ***financial information*** contained in this document, unless expressly indicated otherwise, has been prepared in accordance with the Group's reporting model[2], as described below:

Repsol presents its segment results including joint ventures and other companies that are jointly managed in accordance with the Group's investment percentage, considering operational and economic indicators within the same perspective and degree of detail as those for companies consolidated under the full consolidation method. Thus, the Group considers that the nature of its businesses and the way in which results are analyzed for decision-making purposes is adequately reflected.

Given the nature of its business and in order to make its disclosures more readily comparable with those of its peers, the Group relies on Adjusted Income when measuring the results of each business segment: Current cost of supply ("Current Cost of Supply", or "CCS"), net of taxes and excluding certain income and expenses ("Special Items") and before non-controlling interests.

- For current cost of supply (CCS) earnings, the cost of volumes sold is calculated on the basis of procurement and production costs incurred during the period in question and not based on weighted average cost, which is the accepted methodology under European accounting law and regulations. The difference between CCS earnings and earnings at weighted average cost is included in the so-called Inventory Effect, which also includes other adjustments to the valuation of inventories (write-offs, economic hedges, etc.) and is presented net of tax. This Inventory effect largely affects the Industrial segment.
- Adjusted Income does not include either: (i) the so-called Special Items net of tax and before non-controlling interests, i.e. certain significant items whose separate presentation is considered appropriate to enable closer monitoring of the day-to-day management of the businesses; or (ii) income attributable to non-controlling interests ("Non-controlling Interests"), which is also presented separately, net of tax.

This standard report uses Alternative Performance Measures (APMs), meaning measures that are "adjusted" to those presented under IFRS-EU. The information, breakdowns and reconciliations are included in Appendix II — Alternative Performance Measures of this report and are updated quarterly on the Repsol website (www.repsol.com). The balance sheet, income statement and statement of cash flows prepared under the Group's reporting model are presented in Appendix III.

The ***non-financial information*** regarding the sustainability indicators included in this document has been calculated in accordance with the corporate rules that set out the standard criteria and methodology to be applied in each case. For more information, see section 6 — Sustainability of the Group's 2022 Management Report.

[1] Henceforth, the names "Repsol", "Repsol Group" or "the Company" are used interchangeably to refer to the company group consisting of Repsol, S.A. and its subsidiaries, associates and joint arrangements.
[2] Repsol has revised its financial information reporting model effective January 1, 2023. For more information, see Note 4 — Segment information of the condensed interim consolidated financial statements for the first half of 2023.

Appendix III. Consolidated Financial Statements – Repsol reporting model

Falling prices and normalization of energy markets.

- Resilient but low-growth global economy.
- Decline in crude oil prices and especially gas prices.
- Normalization of refining margins and fuel prices in Europe.

Strong financial performance of the businesses.

- Good results amid lower prices and industrial margins.
- Significant reduction in debt and high liquidity.
- Growing return for shareholders.

1. First half of 2023 in a nutshell

Normalization of the energy markets

The global economy held up relatively well in the first half of 2023, despite showing slower growth. The international landscape was dominated by monetary policy decisions to combat inflation and by the course of global tensions arising from the ongoing war in Ukraine.

International benchmark prices for a large number of energy products (crude oil, gas, electricity, etc.) fell significantly, due to the uncertain economic outlook in the United States and Europe, given the difficulties that both regions face in curbing global inflation, and also in China, as its economy recovery loses steam. Demand for our products was further influenced, albeit unevenly, by milder average temperatures than in the same period of the previous year. ● *For more information, see section 2. Environment.*

Strong results and financial position

Even amid this environment of falling energy prices and slowing demand, Repsol posted solid ***results***, albeit lower than those reported in the previous year.

Results for the period			
(€ million)	**1H 2023**	**1H 2022**	**Δ**
Upstream	884	1,678	(47)%
Industrial	1,623	1,427	14 %
Customer	322	152	112 %
LCG	46	78	(41)%
Corporate and others	(157)	(111)	(41)%
Adjusted income	**2,718**	**3,224**	**(16)%**
Inventory effect	(505)	1,241	-
Special items	(667)	(1,878)	64 %
Non-controlling interests	(126)	(48)	(163)%
Net income	**1,420**	**2,539**	**(44)%**

Adjusted income, which seeks to show the Company's performance from the normal course of its businesses, amounted to €2,718 million (€3,224 million in 2022). Reduced earnings at the Upstream businesses were mitigated by improvements at the Industrial and Customer businesses.

The performance at *Upstream* (€884 million) was impacted by the decline in crude oil realization prices (-27%) and especially gas prices (-46%).

At *Industrial*, the improvement in earnings (€1,623 million) was due to the *trading* businesses, which offset the moderation in Refining margins.

Meanwhile, the *Customer* business (€322 million) reported an improvement across all business lines. Notably, the Mobility businesses in Spain reported a recovery in its margins as it no longer has to apply the discounts rolled out by the government in 2022 and further voluntary discounts offered by the Company to mitigate the impact on customers of rising international fuel prices.

Low Carbon Generation (LCG) saw a reduction in earnings due to lower electricity prices and production (lower demand).

The ***inventory effect*** (€-505 million) reflects the impact of the downward trend in crude oil and product prices.

Special Items (€-667 million) shows lawsuit settlements and the temporary energy levy in Spain.

Non-controlling interests (€-126 million) includes the income attributable to the new partners (25%) of the Upstream and Renewables businesses.

As a result, ***net income*** obtained in the period came to €1,420 million (€2,539 million in 2022).

This net income includes a corporate income tax expense of €1,015 million (effective rate of 40%), with a total of €7,343 million in ***taxes*** paid in the first half of the year, €4,960 of which were paid in Spain.

These results, together with the sale of 25% of the Upstream business, allowed the Company to make a significant investment effort in the period and to improve the shareholder return by a ***cash generated*** of €1,299 million.

Operating cash flow (€3,522 million) showed an improvement when compared with the first half of 2022, as a result of lower prices for inventories. Free cash flow (€468 million) reflects a significant increase in investments in productive assets at LCG and Upstream and in digitalization of the Industrial and Customer businesses.

The ***shareholder return*** includes the payment of a dividend of €0.35 per share in the first half of the year and a further €0.35 in July, up 11% on 2022. Meanwhile, share capital was reduced through the redemption of treasury shares, thus improving earnings per share.

The cash generated has led to a significant reduction in ***net debt*** (€797 million, leverage of 2.8%) and consistently strong liquidity (€11,441 million). This strong financial position has been endorsed by the rating agencies, which have maintained Repsol's investment grade rating, with Fitch upgrading the Company's long-term credit rating.

● *For more information, see section 3. Financial performance and shareholder return.*

Further progress toward industrial transformation, multi-energy offer and decarbonization.

- Incorporation of non-controlling interests at the Upstream business.
- Development of the advanced biofuels plant in Cartagena; investment decision to electrify the crackers at Sines and Tarragona; further progress toward the Hydrogen strategy by including the Tarragona electrolyzer in the European Innovation Funds.
- Multi-energy range of products and services under the new "Connected Energies" program; more than 6.8 million digital customers (Waylet, etc.).
- Upward of 4.4 GW of capacity in solar and wind power generation (acquisition of Asterion Energies, new projects up and running in Spain, Chile, Italy and the United States and driving organic growth).

Businesses performance and transformation

Key actions undertaken by the Company in the first half of the year included the process of making business management more efficient and agile to be able to adapt to the new situation in the markets and the incorporation of new technologies and the digitalization of operations, on the path to achieving the decarbonization and energy transition targets.

At ***Upstream***, the sale of 25% of the Upstream business to EIG Global Energy Partners (EIG) was a particular highlight, as it unlocks the true value of the segment and will allow us to make further progress toward the key objectives set out in the Strategic Plan. Production (602 Kboe/d) was 10% higher than the same period in 2022, mainly due to new assets and wells drilled in the United States and the absence of any production stoppages over security concerns in Libya. Notably, we made further progress in developing key projects in the United States (investments in Marcellus, Eagle Ford and Blacktip), Brazil (final investment decision at Campos-33), Algeria (agreement to extract gas with Sonatrach) and Colombia (exploratory discovery), while also promoting decarbonization projects based on CO_2 capture, sequestration and storage.

At **Industrial**, the Refining complexes reduced their utilization ratios to be able to comply with plant maintenance needs, while still achieving strong margins (albeit significantly lower than in the first half of 2022). Meanwhile, the Chemicals businesses have adapted their production, logistics and commercial schemes to be able to respond to an environment of weak demand and low product prices. Repsol has continued with its drive to transform large industrial complexes as part of its ongoing commitment to the future sustainability of the industry: the Advanced Biofuels Plant (C43) located in Cartagena will be commissioned by the end of 2023, thus achieving the milestone of being the first plant in Spain specifically designed to produce renewable fuels from lipid waste; an investment decision was reached for the first wave of electrification of the large compressors of our crackers at the Sines and Tarragona plants; construction began on the project to expand the Sines Industrial Complex (Portugal); the new maritime terminal was unveiled at the Outer Port of A Coruña, thus improving the logistical handling of new products and raw materials and marking a further step towards the initiative to create a renewable energy hub in A Coruña.

At the ***Customer*** segment, highlights included the decision to maintain the discounts for our customers and accentuate the company's multi-energy profile (launch of the "Energías Conectadas" ("Connected Energies") program.

This strategy, focused on the customer and supported by digitalization, enabled us to increase our service station sales in Spain (+2%) and the number of digital customers (6.8 million at June 30). Electricity and gas customers also increased and, following the acquisition of a 50.01% stake in CHC, will reach 2 million customers.

At ***Low Carbon Generation***, the investment effort in the renewable assets portfolio was a particular highlight, including the acquisition of 100% of Asterion Energies (a development platform that manages a portfolio of renewable assets totaling 7,700 MW, mainly in Spain, Italy and France), other wind and solar projects and the start of production of new renewable solar and wind projects in Spain and Chile. Total installed capacity in operation stood at 4,241 MW, although electricity generation was down 7%, due to the lower production of combined cycle plants.

In the field of ***digitalization***, highlights in the period included the creation of the first Competence Center for generative artificial intelligence (AI) in the European energy sector.

Our ***transformation*** strategy is supported by various institutions. Repsol has submitted projects to the calls for European "*Next Generation*" funding, which would entail investments of more than three billion euros in technological innovation, decarbonization and circular economy; funds have been obtained under the "*Innovation Fund Large Scale 2022: Industry electrification and hydrogen*" for the Tarragona Hydrogen Network project (an electrolyzer with a capacity of 150 MW in its first phase); further funding has been obtained from the Spanish Official Credit Institute and from the European Investment Bank for transformation projects at our industrial complexes.

● *For more information, see section 4. Performance of our businesses.*

In pursuing our objective of ***reducing greenhouse gas emissions*** to limit the effects of climate change, a number of key improvements were made to our facilities during the period, enabling the Company to avoid CO_2 emissions of 55 thousand metric tons.

During the period, Repsol reviewed its ***Global Sustainability Plan (GSP)***, which envisions, among other objectives, new commitments for the production of renewable hydrogen and for achieving a reduction in absolute CO_2 and methane emissions to ultimately become net zero in emissions by 2050.

● *For more information, see section 5. Sustainability and Governance.*

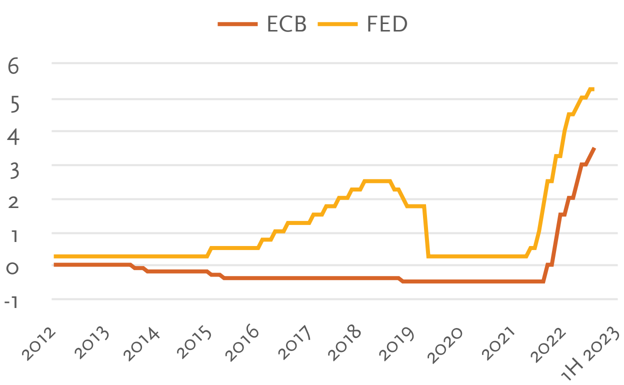
2.1 Macroeconomic environment

Recent economic trends

Throughout 2022, the economic environment and growth prospects worsened due to a combination of: (i) a shock to commodity prices following Russia's invasion of Ukraine and the ensuing sanctions; (ii) the economic slowdown in China due to both a real estate crisis and restrictions resulting from the country's zero-COVID policy; (iii) the appreciation of the dollar, which for other countries meant higher imported prices and higher cost of servicing their dollar-denominated debt.

Inflation, which has been above target levels since 2021, picked up further in 2022 due to the shock to core prices. This led to a cost-of-living crisis, and also elicited a strong response from central banks (CBs). While the CBs had previously refrained from hiking interest rates above their minimum levels in a bid to support economic growth and by arguing that the rise in inflation was transitory, they are now prioritizing inflation control and have significantly tightened their monetary policy.

Trend in ECB and Fed interest rates



Source: Bloomberg and Repsol Research Unit.

Indeed, the US Federal Reserve (Fed), which began its tightening cycle in March 2022, when it raised its benchmark rate from 0.25% to 0.5%, has just raised it to 5.25% in June 2023. Meanwhile, the European Central Bank (ECB), which abandoned negative policy rates in July 2022, made the decision to hike rates to 3.5% in June 2023.

However, the outlook improved somewhat in late 2022 and early 2023, in a context in which (i) inflation, although still high, is beginning to recede in many regions; (ii) Europe benefited from relatively warm weather during the past winter; (iii) the Chinese authorities increased their stimulus measures and ended the country's "zero-COVID" policy, thus helping economic activity to recover in the country.

All in all, the global economy held up relatively resilient in the first half of 2023, despite suffering a certain slowdown in growth (with the Eurozone finally entering recession) amid a very uncertain and risk-ridden environment. Thus, central banks now face the tricky dilemma of having to counter the risk of new episodes of financial instability (such as the failure of Silicon Valley Bank), of avoiding the risk of disinflation being disrupted by the increased rigidity of prices for many services and possible second round effects.

Turning to the exchange rate, further progress in the US economic recovery throughout 2022 led to an appreciation of the dollar against the euro; a trend that soon intensified as the Fed proved to be faster and more decisive than the ECB in its monetary tightening. The rate reached 0.96 dollars/euro at the end of September 2022. However, towards the end of 2022 and in early 2023 —coinciding with the beginning of the decline in inflation in the US and the attenuation of certain risks for Europe— the exchange rate partially reversed its previous trend, returning to a level of 1.09 dollars/euro in January-February of this year, higher than the average of 1.05 dollars/euro for the whole of 2022. Since then, the exchange rate has been fluctuating with no clear direction, reaching around 1.08 dollars/euro at the end of June.

- *For more information, see section 6.1 Outlook for the sector*

2.2 Energy landscape

Crude oil – Brent

During the first half of the year, Brent crude oil prices moved between a range of $70/bbl and $90/bbl, driven by high levels of volatility and uncertainty. They peaked at the end of January, upon reaching $88 per barrel ($/bbl), driven by the improved economic outlook on China and the expectation of a "soft" landing of the US economy. In the second half of March, the price was around $73/bbl, due to fears of a global banking crisis following the collapse of Silicon Valley Bank in the United States, but climbed to around $80/bbl at the end of April, with increases of $5/bbl following the surprise announcement of a production cut by the OPEC+ group.

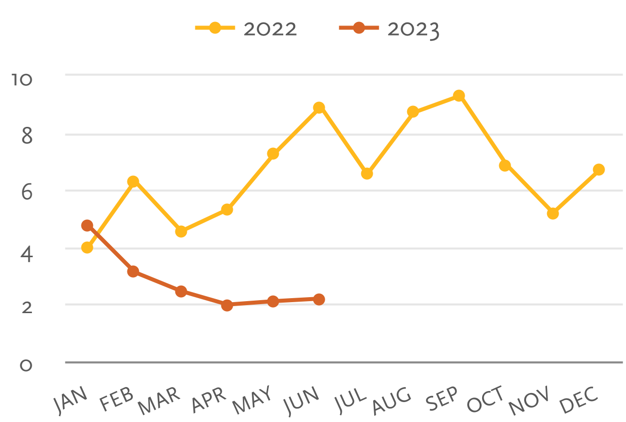
In early May, prices headed downward once again, with sharp declines following the collapse of the US regional bank First Republic Bank, rekindling fears that the US banking crisis would spread to the rest of the world. In June, oil prices seemed to have struck a delicate equilibrium of around $75/bbl, albeit subject to exceptionally high levels of volatility and uncertainty. The announcement of an additional cut of 1 mb/d by Saudi Arabia in July, with the possibility of extending it further if necessary, had a positive impact on prices, but was soon offset by fears about the health of the global economy, which in theory would lead to a reduction in oil consumption.

The latest announcement by the OPEC+ group also included the extension of voluntary cuts of 1.66 mb/d until December 31, 2024 and the reduction, from January 2024 onward, of the group's production quota by 1.4 mb/d from the quota currently in place. The limited effect of the OPEC+ group's announcement of cuts on oil prices demonstrates the disconnect between the trend in fundamentals (oil supply and demand) and the actual path that oil prices are taking, caught between expectations of a potential economic recession and fundamentals that, for the time being, show no signs of weakening.

Natural Gas – Henry Hub (HH)

During the six-month period, the US natural gas HH price averaged $2.8/MBtu, well below the price seen during the same period in 2022 ($6.1/MBtu). While the resumption of export activity at the Freeport LNG plant in April, following the technical shutdown, helped to slightly adjust the domestic market, overall LNG exports barely increased compared to 2022. Production, however, did increase steadily since the start of the year, to move past 102 bcf/d in May, almost 6 bcf/d more than in May of 2022. Faster growth in LNG production than in LNG exports is largely responsible for the low prices. Temperatures were the other big factor in the current bear market and storage surplus.

Henry Hub price performance ($/MBtu)



Source: Bloomberg and Repsol Research Unit.

Additionally, the situation in the gas market following the outbreak of the war in Ukraine caused uncertainty in the global market and kept price volatility high. The medium-term need for gas in countries such as China and India ensures a niche market in the mid term for LNG originating from the United States. In the short term, the good level of inventories in all basins is expected to keep gas prices limited over the coming weeks.

Electricity prices

The average wholesale price of electricity in 2023 was €88.9/MWh, well below the €205.6/MWh in the previous year. We would need to add to this price the adjustment made to consumers in the market following implementation of the electricity price adjustment mechanism (known as the "cap on gas"). However, as this mechanism has been offline since the end of February due to falling gas prices, the average wholesale price has barely changed in cents.

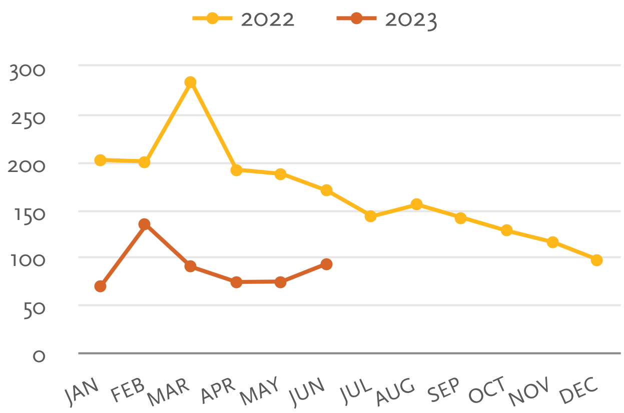
The electricity market in Spain is currently showing a series of traits that are having a strong influence on the market. The first of these is the drop in demand, due to prevailing weather conditions, an increase in self-consumption (due to new photovoltaic installations) and lower industrial consumption. The combination of these factors caused demand to fall by more than 5% in the first half of 2023 compared to the same period of the previous year.

The heavy increase in the installation of photovoltaic capacity has caused solar generation to reach an all-time high, and it accounts for almost 14% of total generation (compared to 10% last year). This increase in generation at specific times of the day, together with the reduction in consumption, has accentuated a process that had been consolidating in recent years: a drop in prices towards the middle hours of the day, when prices are much lower than even nighttime hours.

Another relevant aspect has been net electricity exchanges, which increased due to higher exports to France, while exports to Portugal also remained high.

The hydraulic situation also changed significantly in the first six months of the year. While in early 2023 the situation of the reservoirs was very good, allowing for hydro generation at levels much higher than those achieved the previous year, the scarce rainfall in April and May and the uncertainty of water availability in summer caused a sharp drop in hydroelectric generation, despite reserves being better than last year. Heavy rainfall in June turned the situation around again, and in the first 18 days the same amount had already been generated as in the entire month of June of 2022.

Trend in electricity prices (€/MWh)



Source: Bloomberg and Repsol Research Unit.

CO_2 emission allowances

The price of CO2 emission allowances fluctuated during the first half of 2023, moving within a range of almost €25/t around an average of €89.5 €/t, slightly above the €83.6 €/t at which it traded in the same period of 2022.

Market movements were driven by gas prices and global economic uncertainty, though they were also heavily influenced by regulatory changes, including the official approval of the *Fit for 55* package with the emissions market reforms.

Trend in CO2 prices (€/t)

Adjusted income	**2,718**	**3,224**	**(16)%**
Inventory effect	(505)	1,241	-
Special items	(667)	(1,878)	64 %
Non-controlling interests	(126)	(48)	(163)%
Net income	**1,420**	**2,539**	**(44)%**

The results for the first half of 2023 reveal a normalization of conditions within the energy markets, when compared to the extraordinary circumstances that unfolded in the same period of 2022.

Adjusted income for the first half of the year amounted to €2,718 million, down on the previous year due to lower prices and weak demand. Income were down at Upstream (lower prices for crude oil and especially gas) and LCG (lower electricity prices), but up at both Industrial (higher profits at the trading businesses, partly offset by a moderation in refining margins and low chemical margins) and Customer (recovery of margins in the fuel and electricity and gas businesses in Spain).

EBITDA fell significantly (€4,303 million vs. €8,019 million in 2022), due to the decline in crude oil and gas realization prices and lower margins at Refining and Chemicals.

EBITDA *(€ million)*	1H 2023	1H 2022
Upstream	2,318	3,689
Industrial	1,951	3,933
Customer	539	457
LCG	108	139
Corporate and other	(613)	(199)
TOTAL	**4,303**	**8,019**

Upstream

Average **production** in the period was 10% higher than in 2022 (at 602 Kboe/d) and **exploratory activity and investment** was also down.

● *For more information on the activities of the segment, see section 4.1 Upstream.*

Adjusted income for this segment in the first six months of the year amounted to €884 million, down €-794 million on the same period of 2022, largely due to:

- the drop in crude oil (-27%) and especially gas (-46%), realization prices, which mainly affected the results obtained in North America, Trinidad and Tobago, Norway, Peru, Libya and Brazil;
- an increase in sales compared to the previous year, mainly in North America following the incorporation of new wells at Eagle Ford and Marcellus and in Libya and Norway due to stoppages in 2022;
- higher depreciation, largely due to increased production and investment in the United States;
- higher production costs due to the start-up of strategic projects such as new investments and wells at Eagle Ford and Marcellus in the United States, and YME in Norway;
- lower taxes on production and hydrocarbon royalties, as prices decline; as well as lower tax on profits (effective tax rate of -41%), largely due to a reduction in operating results; and
- lower exploration expenses due to a less intense exploration campaign and portfolio optimization;

Investment in the first half of the year (€1,272 million) was significantly up on 2022 (+71%). Investment activity centered on assets in production and/or under development in the United States, Trinidad and Tobago, Colombia, the United Kingdom, Brazil and Peru. Meanwhile, exploratory investment took place mainly in the Gulf of Mexico (United States) and Colombia.

Industrial

Adjusted income in the first half of 2023 amounted to €1,623 million, compared to €1,427 million for the same period in 2022.

The main reasons for this change are as follows:

- The ***Refining*** businesses reported a reduction in earnings compared to the same period in 2022. International margins have been significantly moderated throughout the period -due to lower product prices- and plant utilization levels also fell due to scheduled stoppages.
- Results at ***Chemicals*** worsened and became negative for the period, due to lower product margins, lower sales (a result of weak demand amid the current international economic situation), and reduced earnings from the cogeneration plants.
- Results at both ***Trading*** and ***Wholesale and Gas Trading*** saw an improvement on the previous year, mainly due to an increase in the value of gas contracts and commitments, taking advantage of market conditions in operations and optimization of shipping management.

Investment at Industrial in the first half of 2023 amounted to €430 million, up 16% on the same period in 2022, (which included the purchase of a 14% stake in the Canadian company Enerkem). The investments were largely made for the maintenance and improvement of activities at the industrial complexes, as significant investments and decarbonization projects are in the works (highlights in the first half of the year included the investments made in advanced biofuel plants in Cartagena -Refining- and in linear polyethylene and polypropylene plants in Sines -Chemicals-).

● *For more information on the segment's activities, see section 4.2 Industrial.*

Customer

Adjusted income in the first half of 2023 amounted to €322 million, compared to €152 million in the same period of 2022.

This improvement was due to:

- Better results at the ***Mobility*** business, mainly at service stations in Spain due to lower discounts.
- Improved results at ***Lubricants, Aviation, Asphalts and Specialties***, driven by Lubricants and Asphalts (lower cost of raw materials), though partially offset by a downturn in earnings at Aviation (despite an increase in volumes sold).
- Improvement in ***LPG*** results, largely due to the trend in international prices in the first half of the year, which supported margins.
- ***Retail Electricity and Gas*** results also saw an improvement, due to lower energy supply prices (see section 2.2 Energy landscape), despite lower consumption among customers (who increased in number to 1.75 million, including the 224 thousand customers of Gana Energía, an equity-accounted company, and 34 thousand in Portugal).

Investment at Customer in the first half of 2023 amounted to €132 million, up 57% on the same period of 2022. Investments were mainly allocated to the Electricity and Gas marketing businesses (with significant efforts made in customer acquisition) and to Service Stations in Spain.

● *For more information on the segment's activities, see section 4.3 Customer.*

Low Carbon Generation

Adjusted income in the first half of 2023 amounted to €46 million, compared to €78 million for the same period in 2022.

- At ***Renewables***, earnings were down on the first half of 2022 mainly due to lower prices captured, though partially offset by higher Hydro and Wind production.
- At ***Combined Cycles***, earnings were down due to lower production (lower thermal gap and scheduled stoppages) and lower prices captured (despite gas prices being lower).

Investment in the first half of 2023 amounted to €1,179 million (up 508% on 2022). These funds were mainly used for the acquisition of a 100% stake in Asterion Energies and a further 35% stake in the Antofagasta wind farm (Chile), and also for the development and production start-up of new renewable energy projects in Spain and the United States.

● *For more information on the segment's activities, see section 4.4 Low Carbon Generation.*

Corporate and other

The results of the first half of 2023 amounted to €-157 million (compared to €-111 million in 2022). The lower financial result was largely down to the excellent results on treasury share positions in the first half of 2022.

Meanwhile, Repsol has continued its efforts to reduce corporate costs, in line with the objectives envisaged in the 21–25 Strategic Plan, while continuing to promote digitalization and technology initiatives.

Net income

Net income is affected by the following factors:

- The **inventory effect** of €-505 million, compared with €1,241 million in the first half of 2022, due to the steady decline in the price of crude oil and other oil products.
- **Special items** in the first half of 2023 amounted to €-667 million and reflect lawsuit settlements and the temporary energy tax in Spain.

Special items *(€ million)*	**1H 2023**	**1H 2022**
Divestments	—	8
Indemnities and workforce restructuring	(23)	(16)
Impairment [(1)]	354	(1,262)
Provisions and others[(2)]	(998)	(608)
TOTAL	**(667)**	**(1,878)**

(1) Reversals at Refining Spain following the accrual in January 2023 of the temporary energy tax (see Note 3.2.1 to the 1H23 interim financial statements), which had been counted in the future cash flows of the 2022 impairment test.
(2) Includes, in 2023, provisions for credit risk in Venezuela, legal, tax and environmental litigation and the accrual of the temporary energy tax.

These settlement agreements aim to put an end to two significant lawsuits related to investees in the United States and the United Kingdom, relating to events that took place before Repsol acquired its stake in those companies. In the United States, the lawsuits related to the Maxus company (acquired by YPF in 1995) were ended; in the United Kingdom, Repsol and Sinopec -current shareholders of the joint venture Repsol Sinopec Resources UK (RSRUK)- reached an agreement, subject to the fulfillment of certain conditions, to terminate the arbitration proceedings initiated by Sinopec in relation to the process of acquiring a 49% stake in RSRUK from the Canadian group Talisman in 2012. ● *For more information, see Notes 4.1 Disputes and 3.1.2 Investments accounted for using the equity method to the 1H23 interim financial statements.*

- **Income attributable to non-controlling** interests in the first half of 2023 amounted to €-126 million, and include income attributable to the new partners (25%) of the Upstream and Renewables businesses.

As a result of the above, the Group's ***net income*** in the first half of the year came to €1,420 million, compared to €2,539 million in 2022. Profitability indicators and earnings per share are as follows:

Profitability indicators	**1H 2023**	**1H 2022**
ROACE- Return on average capital employed (%)	5.4	8.8
Earnings per share (€/share)	1.08	1.74

3.2 Cash generation

Cash flows *(€ million)*	1H 2023	1H 2022
EBITDA	4,303	8,019
Changes in working capital	325	(3,965)
Income taxes received/(paid)	(896)	(885)
Other proceeds/(payments)	(221)	(257)
Dividends received	11	18
I. Operating cash flow	**3,522**	**2,930**
Payments for investments	(3,113)	(1,617)
Proceeds from divestments	59	141
II. Cash flow from investments	**(3,054)**	**(1,476)**
Free cash flow (I + II)	**468**	**1,454**
Dividends [1]	(501)	(486)
Transactions with non-controlling interests [2]	1,952	102
Net interests and leases	(192)	(215)
Treasury shares	(428)	(383)
Cash generated	**1,299**	**472**

[1] Dividends include coupons from perpetual bonds (other equity instruments).
[2] In 2023, the sale of 25% of the Upstream business was a particular highlight.

Operating cash flow (€3,522 million) was higher than in the first half of 2022, despite the significant decline in EBITDA, due to the better performance of working capital, which in 2022 was exceptionally negative (€-3,965 million) as a result of the effect of the higher cost of inventories due to higher prices and volumes of inventories at the Industrial businesses.

The increase in investments resulted in lower **cash flow from investing activities** (€-3,054 million). Investments in the first half of 2023 include those made at the Upstream segment (particularly those carried out in the United States, including the investment to acquire Eagle Ford from INPEX) and LCG (inorganic acquisition of 100% of Asterion Energies and organic growth to continue with international expansion in the United States and undertake projects in Spain).

● *For more information on the acquisition of Asterion Energies, see Note 3.1 Balance Sheet to the 1H23 interim financial statements.*

The **free cash flow** for the first six months year was €468 million, down on the €1,454 reported in 2022.

Meanwhile, the cash obtained from the 25% dilution at the Upstream business (€1,852 million in proceeds) -as reflected under "Transactions with non-controlling interests"- allowed Repsol to pay the cost of financing and shareholder return (higher cash dividend and acquisition of treasury stock worth €-428 million, including repurchase plans for amortization of treasury stock) and **generate cash** of €1,299 million.

3.3 Financial position

In the first half of 2023, in line with the commitment to strengthen the Group's financial structure, Repsol continued to push forward with various measures that have enabled it to lower its indebtedness.

Maintaining our policy of financial prudence and our commitment to maintain a high degree of liquidity, the liquidity held at the end of the year (in the form of cash and available lines of credit) was sufficient to cover all debt maturities, without the need for refinancing, thus allowing the Group to cope with the heavy volatility and uncertainty present within the financial markets.

Main financing transactions

The main financial transactions in the first half of 2023 were as follows:

- In January and June 2023, Repsol International Finance B.V. repurchased and partially canceled the bond issued in March 2015 worth €1,000 million (maturing in March 2075 and paying an annual coupon of 4.5%), for a nominal amount of €274 million.
- In May, a bond of Repsol International Finance, B.V. (RIF) was canceled at maturity, for a nominal amount of €300 million and paying a variable coupon indexed to the 3-month Euribor + 70 basis points.

Sustainable finance

In pursuing the integral sustainable financing strategy implemented through the Sustainable Finance Framework (available at www.repsol.com), highlights in the first half of the year included:

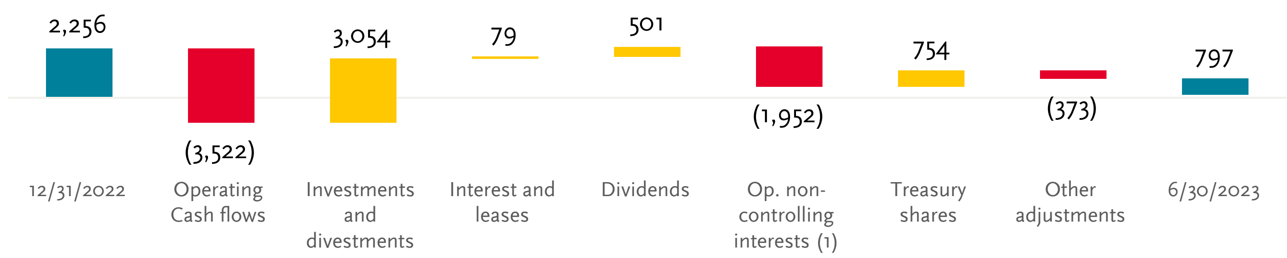
- The European Investment Bank (EIB) granted a loan of €120 million to support the construction and operation of the Cartagena advanced biofuels plant.
- The Official Credit Institute (ICO) granted a €300 million loan linked to the transformation of our industrial facilities. As of June 30, it had yet to be drawn down.

● *For more information see Note 6.3 Highlights in the second half of the year.*

Leverage

Net debt (€797 million) was significantly down compared to December 2022, mainly due to higher operating cash flow and cash obtained from the 25% dilution of the Upstream business. The **leverage** ratio (2.8%)was down from December 2022 levels(16.6%).

Trend in net debt
€ million



(1) Does not include the deferred payment from the sale of a 25% stake in Upstream, as included in *Other adjustments*.

Gross debt amounted to €11,433 million (€14,314 million at December 31, 2022) and its maturity at June 30, 2023 is as follows:

€ Million	2023	2024	2025	2026	2027	2028 and beyond	TOTAL
Bonds(1)	—	849	1,477	499	747	2,082	5,654
Leases	299	505	404	344	311	1,834	3,696
Loans and credits	464	119	161	60	37	199	1,041
Commercial paper (ECP)	798	—	—	—	—	—	798
Other (2)	76	15	4	4	21	125	245

Note: the amounts shown in the table are the accounting balances recognized in the balance sheet.

(1) The maturity of the subordinated bonds is presented as occurring on the first call date.

(2) Includes mainly institutional financing and interest, derivatives and others.

Credit ratings

The credit ratings assigned to Repsol, S.A. by the various ratings agencies are currently as follows:

	Standard & Poor's	Moody's	Fitch
Long-term	BBB +	Baa1	BBB+
Short-term	A-2	P-2	F-1
Outlook	stable	stable	stable
Date of latest modification	11/16/2022	12/20/2022	06/01/2023

Treasury shares

At June 30, 2023, the balance of treasury shares in equity was 535,904 shares, representing 0.04% of the share capital at that date. ● *For more information, see Note 3.1.4 Equity to the 1H23 financial statements.*

During the first half of the year, transactions with derivatives on treasury stock were completed. ● *For more information, see Note 3.1.7 Derivatives to the 1H23 financial statements.*

Liquidity

The Group's liquidity at June 30, 2023, including committed and undrawn credit lines, amounted to €11,441 million, sufficient to cover its short-term debt maturities by a factor of 5.8. Repsol had undrawn credit lines of €2,639 million at June 30, 2023 (€2,389 at December 31, 2022).

3.4 Shareholder return

During the first half of 2023, shareholders received a total of €0.35 gross per share, corresponding to: (i) a dividend of €0.325 gross per share charged to voluntary reserves from retained earnings; and (ii) a dividend of €0.025 gross per share charged to 2022 profits. The amount paid totaled €454[1] million.

In June, the capital reduction approved at the 2023 Annual General Shareholders' Meeting, under item seven on the Agenda, was carried out with the redemption of 50 million treasury shares, thus contributing to shareholder return through the resulting increase in earnings per share.

In July 2023, a final cash dividend of €0.35 gross per share was paid out of 2022 profits, for a total amount of €447[1] million.

The 2023 General Shareholders' Meeting also approved the distribution of a gross dividend of €0.375 per share, charged to free reserves. It will be paid out in January 2023, on the date specified by the Board of Directors.

Lastly, the Board of Directors, at its meeting of July 26, 2023, and further to the resolution passed by shareholders at the 2023 Annual General Meeting, under item eight on the agenda, agreed to an additional capital reduction through the redemption of 60 million treasury shares with a par value of one euro each.

● *For more information, see Note 3.1.4 Equity to the 1H23 interim financial statements.*

[1] Remuneration paid to outstanding shares of Repsol, S.A. conferring the right to receive the dividend.

Our share

Repsol's share price during the first half of the year declined steadily from the level reported at the beginning of the year (-10%), as did the share price of Repsol's peers (-8%) in the Oil & Gas sector[2], as all companies have been affected by the decline in hydrocarbon prices (especially gas; HH down -37%). The average share price for the period was 10% higher than in 2022.

Trend in the share price (€/share)

The Group's main stock market indicators in 2023 and 2022 were as follows:

Main stock market indicators	1H 2023	1H 2022
Shareholder return[(1)] (€/share)	0.35	0.30
Share price at end of period[(2)] (euros)	13.33	14.05
Period average share price (euros)	14.09	12.76
Period high (euros)	15.53	16.12
Period low (euros)	12.53	10.42
No. of shares outstanding at June 30 (million)	1,277	1,452
Stock market capitalization at June 30[(3)] (M euros)	17,028	20,406

(1) See previous section.
(2) Share price at year-end in the continuous market of the Spanish stock exchanges.
(3) Year-end closing market price per share, times the number of shares outstanding .

[2] Comparable companies considered in the Oil & Gas sector: Royal Dutch Shell, Total Energies, British Petroleum (BP), Equinor, ENI, OMV and Galp.

Gas realization price ($/kscf)	4.0	7.4

Main events in the period

Repsol completed the sale of 25% of its Upstream business as a sign of the Group's continued commitment to generating shareholder value by unlocking the embedded value of this business (the deal valued the Upstream business at $19 billion).

In the first half of the year, several major investment agreements were reached for gas extraction in Brazil (Campos 33) and Algeria (Menzel Lejmat Nord), and several decarbonization projects were promoted in the United States and Indonesia for the capture, sequestration and storage of CO_2 (CCS), as well as geothermal projects in Spain.

Average production

Average production at Upstream in the first half of the year reached 602 Kboe/d, up 10% Kboe/d higher than in the same period of 2022. This change was largely due to the commissioning of new wells at the Eagle Ford and Marcellus unconventional assets in the United States, the acquisition of Inpex's assets at Eagle Ford in the United States, start of production of the YME project in Norway, and the fact that no production stoppages over safety concerns took place at the Libyan fields. However, this improvement was partially offset by the sale of productive assets, along with maintenance operations and incidents in T&T, Brazil and the United Kingdom, and the natural decline of fields.

Exploration campaign

In 2023, drilling of three exploratory wells was completed in Colombia, of which one yielded positive results while two remain under evaluation. As of June 30, one exploratory well in Colombia and one *appraisal* well in Brazil were in progress.

Acreage

During the first half of the year, the final investment decision was made at Campos 33, located in the BM-C-33 block in Brazil, and various interests were acquired at the Alaminos Canyon and Walker Ridge areas of the U.S. Gulf of Mexico. Elsewhere, the Kanuku block in Guyana was returned.

North America

United States: technological development, increased participation in Blacktip and development of CCS projects in the Gulf of Mexico

In March, at Marcellus, Repsol was one of the first to use a new, cleaner "E-fleet" stimulation technology to transition from diesel to gas-fired turbines. By implementing this innovative technology, Repsol expects to reduce CO_2 emissions from its Marcellus operations by up to 23%.

In May, Repsol raised its stake in the Blacktip deepwater project —which includes the Blacktip and Blacktip North discoveries in the U.S. Gulf of Mexico— to 50% by acquiring interests from previous owners Shell and Equinor. The remaining 50% is held by operating partner Llog Exploration.

In May, the U.S. Department of Energy selected Repsol to head up a carbon capture and sequestration (CCS) project off the coast of Louisiana, in consortium with Crescent Midstream LLC, Cox Operating LLC and Carbon Zero US LLC.

In June, Repsol acquired a 33% interest in blocks 644, 687, 688 and 731 in the Alaminos Canyon area and a 20% interest in blocks 004, 005, 048, 090, 091, 092, 134 and 135 in the Walker Ridge area of the U.S. Gulf of Mexico.

Mexico: block 29 extension and mangrove restoration

In April, Repsol received approval from the Mexican regulator to extend the exploration period of its contract in the Area 29 Southeast / Campeche deepwater basin for three years until June 18, 2026. Repsol is the operator of Block 29 with a 30% interest.

In May, Repsol initiated two mangrove restoration projects in the states of Campeche and Tabasco.

Latin America

Brazil: final investment decision on Campos 33

In May, the final investment decision (FID) on the BM-C-33 block was approved, which will help ensure an orderly transition to a low-emission future as it will be a key supplier of gas to the Brazilian domestic market. Repsol was the operator during the exploration stage when the Gavea, Seat and Pao de Açucar fields were discovered. The investment includes an innovative concept in Brazil, namely the use of a Floating Production, Storage and Offloading Unit (FPSO) that will be able to process the gas produced at the site and specify it for sale without the need for additional processing.

Colombia: discovery at CPO-9

In May, the discovery of hydrocarbons was completed at the Tinamú-1 well located in block CPO-9, in which Ecopetrol holds a 55% interest and acts as operator, while Repsol holds the remaining 45%.

Guyana: completion of the Kanuku contract

In May, Repsol did not renew the Kanuku contract at the end of the second exploratory phase, having already fulfilled all of its exploratory commitments.

T&T: Completion of drilling campaign

In May, Repsol and its operating partner BP successfully completed phase one of the drilling campaign that began in October 2022. The campaign includes three wells at the Mango field, one well at the Savonette field and three wells at the Angelin field. The wells are producing more than 180 million standard cubic feet per day (mmscfd).

Venezuela: Improved prospects for the operation

While the political and economic landscape remained the same, the prospects for the operation improved due to the incipient relaxation of the coercive measures of the United States Government against Venezuela. ● *For more information, see Note 4.3 Geopolitical risks to the 1H23 interim financial statements.*

Europe, Africa and rest of the world

Norway: license extension at the Rev field

In April, the Norwegian regulator granted a further extension to produce at the Rev field under license PL 038 C (Viking Graben), valid from the end of 2023 to the end of 2026. Repsol is the operator at the Rev field with a 70% interest.

Spain: New geothermal permits

In February, Repsol obtained two exploratory geothermal permits on the island of Tenerife (Isora and Tajao), thus joining the recently renewed Lisa exploratory permit in Gran Canaria. Meanwhile, Repsol is taking part in the tender processes for geothermal research permits on the islands of Tenerife and La Palma, thus illustrating the progress being made by the Company in low-carbon geological solutions as a driver of growth towards the ultimate goal of zero net emissions.

UK: agreement with Sinopec

In April, Repsol and Sinopec, current shareholders of the Repsol Sinopec Resources UK (RSRUK) joint venture, reached an agreement albeit subject to the fulfillment of certain conditions to put an end to the arbitration proceedings initiated by Sinopec in relation to the process to acquire a 49% stake in RSRUK from the Talisman Group in 2012. Repsol and Sinopec will continue their extensive strategic collaboration, including through their joint venture in Brazil. ● *For further information, see Notes 3.1.2 Investments accounted for using the equity method and 4.1 Disputes to the 1H23 interim financial statements.*

Libya: operations with no incidents

Operations progressed normally during the first half of the year despite the unstable political situation. ● *For more information, see Note 4.3 Geopolitical risks to the 1H23 interim financial statements.*

Algeria: new contract for the exploitation of hydrocarbons

In June, Repsol signed a hydrocarbon exploitation contract at the Menzel Lejmat Nord (MLN) area of Block 405A. Under this new contractual framework, Repsol has agreed to undertake new investments alongside its partners —Algeria's Sonatrach and Indonesia's Pertamina— to allow the partners to recover some 150 Mboe. The new contract has yet to be officially ratified by the Algerian regulator. ● *For more information, see Note 4.3 Geopolitical risks to the 1H23 interim financial statements.*

Indonesia: engineering bidding on the Sakakemang project

In March, Repsol began work on the initial engineering and design tender for its Sakakemang project in onshore Indonesia, which aims to exploit the Kali Berau Dalam gas field and incorporate a carbon capture and storage (CCS) system.

Development of new technologies

In April, Repsol implemented, with the help of Halliburton, a new technology based on the Landmark DecisionSpace 365 Well Construction Suite tool to automate the well design process. Well Construction Suite and Digital Well Program help standardize the well design process and automate routine work to increase efficiency and minimize downtime. They will ultimately help shorten well planning time, automate engineering calculations and reduce nonproductive time.

4.2 Industrial

January	February	March	April	May	June
Agreement with ASAJA to convert waste into renewable fuels.	Investment decision to **electrify the crackers at Tarragona and Sines**.	Start of **Sines expansion** and inauguration of new **maritime terminal** in A Coruña.	Start-up of the **LNG bunker terminal** investment **in Santander**.	Launch of **new bio-based poleolefins**.	Further progress in building an **advanced biofuels plant** in Cartagena (start-up: 2023**)**.

Main events in the period

Activity at the Industrial business was heavily affected by the high volatility within the raw material and product markets, and production, logistics and commercial structures had to be adjusted accordingly. All this has not detracted from the drive towards decarbonization, as evidenced by the progress made toward various projects at the industrial complexes.

Refining

Performance: high margins and further progress toward decarbonization

The prevailing volatility was evident in the case of the refining margin indicator in Spain ($11.0/bbl). The margin indicator steadily fell in the first few months of 2023, starting with a very strong January at $20.3/bbl but retreating in May by as much as 70%. This was largely down to the weak performance of middle distillates due to the ample availability of product in European stocks and slowing demand. This supply-demand mismatch is being compounded by the endemic state of refining in the European Union, which has seen its capacity pared back by more than 10% in the last decade, mainly due to the closure of 24 facilities amid an environment of low profitability and regulatory uncertainty.

Average distillation utilization was 82% in Spain compared to 87% the previous year, impacted by higher maintenance shutdowns (primarily multi-year shutdowns at the A Coruña refinery: distillation units, vacuum, reforming, hydrodesulfurization and distillation units; at the Cartagena refinery: hydrocracker and the Crude 2 unit; at the Tarragona refinery: distillation unit and visbreaker; and at the Bilbao refinery: distillation, reforming, HDT and visbreaking unit).

In Peru, the refining margin rate was $8.5/bbl, compared to $19.2/bbl in 2022. Average distillation utilization was 80% in the country compared to 69% in the previous year, impacted in 2022 by the closure of terminals following the oil spill, but down in the period due to adverse weather conditions (rough seas) in the second quarter. ● *For more information on the spill, see section 5. Sustainability and Governance, and Note 4.4 Environmental risks of the 1H23 interim financial statements.*

Development of cutting-edge decarbonization projects

In March, Repsol inaugurated the maritime terminal at the outer port of Punta Langosteira (A Coruña). This project to transfer the crude oil operations to the Outer Port has entailed an investment of more than €126 million and the construction of a large piece of infrastructure featuring the highest standards of quality, safety and environmental protection. The new facilities will be key to the ongoing industrial transformation of the complex, thus contributing to the Port Authority of A Coruña Green Port initiative for the creation of a renewable energy hub.

This initiative complements the development in Cartagena of Spain's first advanced biofuels plant; or the electrolyzers linked to the facilities in Bilbao or Tarragona (see section on Hydrogen, Circular Economy and Renewable Fuels). Repsol is also progressively increasing its production of biofuels, which has contributed positively to the results of the industrial business.

Chemicals

Performance: falling margins and demand

The performance of the Chemicals business was significantly lower than in 2022, with a significant decline in the margin indicator (€242 vs. €324/t in the first half of 2022). This reduction is down to a considerable slump in demand and has led to lower activity and adjustments to plant operations. Sales amounted to 1,039 kt, 24% lower than in the previous year.

Electrification of industrial complexes

The investment decision was made for the first wave of electrification of the large compressors of the crackers at Sines and Tarragona, for an amount of €165 million and an emission reduction of 260 kt of CO_2, meaning that these units will emit 15% less. Both projects will be operational in 2025.

Differentiation and Circular Economy

In February, Repsol Reciclex® stepped up its polyolefin production. The company will install a new production line for mechanically recycled plastics, with sufficient capacity to manufacture 25 kt/year at Puertollano (16 kt/year at present), making this center a benchmark for the circular economy in the Iberian Peninsula. The unit will come on stream in the last quarter of 2024.

In March, construction began on the project to expand the Industrial Complex at Sines (Alba Project). The project includes the construction of two new plants, one for linear polyethylene and the other for polypropylene, with a production capacity of 600 kt/year. The new products will be 100% recyclable and can be put to use in highly specialized applications in industries such as pharmaceuticals, automobiles and food. Further initiatives underway include decarbonization and energy transition programs, photovoltaic power generation projects, electrification, hydrogen and improvements to logistics infrastructures.

In May, Repsol launched bio-based polyolefins to reduce the medical sector's carbon footprint. For the manufacture of these products, traditional raw materials are replaced by oils from sustainable crops or organic waste, which have previously captured CO_2 from the atmosphere through photosynthesis during the natural growing cycle. As a result, these bio-based polyolefins deliver a negative carbon footprint according to the "*cradle-to-gate*" methodology, by effectively removing more CO_2 from the atmosphere than the emissions generated in the supply chain processes.

Trading

In the first half of 2023, 690 ships were chartered (660 in the same period of 2022) and 192 fleet voyages were made under time charter arrangements (186 in 2022).

Wholesale and Gas Trading

Performance: falling prices and reduced demand

In the first half of 2023, commercial activity took shape amid an environment of falling prices and lower demand compared to the same period of 2022, which ultimately led to a reduction in sales in the United States (247 TBtu in the first half of 2023) and for supply and marketing in Spain and International (115 TBtu in the first half of 2023).

Start-up of the Santander bunkering plant

In April, Repsol brought the Santander *bunkering* plant on stream by having tankers unload their LNG into its tanks and the first product was transferred to a vessel of our customer *Brittany Ferries*.

Hydrogen, Circular Economy and Renewable Fuels

With respect to the circular economy, in January a collaboration agreement was signed with ASAJA to transform agricultural and livestock waste into renewable fuels and to reuse by-products from the refining industry as fertilizers in agricultural soils to increase their yield and productivity.

Further progress was made towards the main renewable fuel projects in the first half of the year:

- Construction of the first advanced biofuels plant at the Cartagena refinery, which will be commissioned this year. Upwards of €200 million has been invested and the plant will have the capacity to produce 250,000 metric tons per year of advanced biofuels from waste, thus allowing for a reduction of 900,000 metric tons of CO_2 per year.
- EcoPlanta, the first plant in Spain to rely on innovative technology to recover non-recyclable municipal solid waste into circular methanol that will then be used to manufacture new materials and advanced biofuels.
- At the plant for the production of synthetic fuels from CO_2 and renewable hydrogen, and on the urban waste valorization project in Bilbao.

We would also highlight the support received from several external institutions in the context of the ongoing industrial transformation process:

- The Official Credit Institute has granted a loan of €300 million linked to sustainability criteria and focused on the transformation of Repsol's industrial complexes.
- The European Investment Bank (EIB) granted a €120 million loan to support the construction and operation of the Cartagena advanced biofuels plant.
- The IDAE has granted €25 million in aid, €10 million for the installation of a 30 MW electrolyzer at Puertollano and €15 million for a second 30 MW electrolyzer located at the former thermal power plant of Meirama (A Coruña).
- In July, the resolution of the projects proposed for the "*Innovation Fund Large-Scale Call 2022: Industry electrification and hydrogen*" was published, in which our project —Tarragona Hydrogen Network (T-HYNET)— was one of the projects put forward to receive the grant (an electrolyzer with a capacity of 150 MW during phase one) and which was ultimately awarded funding of €62.8 million.

4.3 Customer

[1] Own marketing sales in Spain are those marketed through the controlled and licensed subsidiaries and the Direct Sales business unit.

[2] Does not include the 224 thousand customers of companies accounted for using the equity method (Gana Energía), or the portfolio of customers in Portugal (34 thousand customers).

Main events in the period

In the first half of the year, Repsol launched a pioneering commercial offer in Spain, which improves the value proposition we provide to our customers by linking all the energy sources needed for mobility and the home, and raises the Company's multi-energy profile.

Repsol achieved the milestone of 6.8 million digital customers, with Waylet leading the way, having now surpassed 6 million users.

Mobility

Performance: discounts and digitalization

At Service Stations in Spain, fuel sales were up 2% in the first half of the year compared to the same period in 2022, while Direct Sales (gasoline + automotive diesel) were down 26%.

Following the end of the general discount of 20 euro cents per liter approved by the government, and following a first quarter of maintaining the 10-cent bonus for Waylet users, Repsol has linked its fuel discounts to a single multi-energy offer: Energías Conectadas – Connected Energy (see callout on next page).

May witnessed the launch of Repsol Klin, a new car wash network concept with a fully personalized, digitalized service, where all payments can be made through Waylet and integrated into Repsol's commercial offer, which seeks to meet the new needs of drivers of vehicles, vans and motorcycles.

Electric mobility and sale of biofuels

In February, Repsol and Bolt reached an agreement that will expedite the energy transition for small vehicle fleet owners, self-employed with private vehicles for hire and cab drivers, thanks to a comprehensive charging service offered by Repsol with the assurance that the electricity used is 100% renewable.

An agreement has also been signed with Mercadona for Repsol to manage the charging stations installed at its stores.

In March, Repsol and SEUR signed a strategic agreement whereby Repsol will install and operate more than 150 charging stations at the courier's 55 work centers across the country in order to take a further step forward in decarbonizing its vehicle fleet.

In April, Repsol and FREENOW signed an agreement whereby Repsol became FREENOW's approved energy supplier in Spain for its drivers, with a vehicle charging service at service stations or on public roads using 100% renewable electricity.

In May, Repsol began selling 100% renewable diesel at three service stations (Madrid, Barcelona and Lisbon), becoming the first Spanish company to sell 100% renewable fuel on the Iberian Peninsula. By the end of 2023, a total of 50 service stations will supply advanced biofuel with net zero emissions in the main cities and transport corridors of the Iberian Peninsula.

Repsol currently has one of the largest electric vehicle charging networks in the country, with more than 1,500 public access charging stations installed, of which more than 690 are operational.

In April, Repsol announced the launch of a new service of collection points for used cooking oil at its service stations in the Community of Madrid. The company thus promotes the circular economy by using this oil as a raw material to produce renewable fuels, with zero net CO_2 emissions.

Distributed generation

In March, agreements were signed with the Archbishoprics of Madrid and Toledo to develop Solar Communities at their buildings in order to promote the generation and consumption of locally produced renewable electricity. During the initial phase, a total of 10 solar communities will be deployed in Madrid and almost 30 in Toledo. Through this alliance, more than 700 homes in Madrid and more than 2,800 in Toledo (near the parishes) will be able to benefit from collective self-consumption of renewable energy.

Solmatch currently has 363 solar communities in Spain, with a total installed capacity of 10,355 KWp.

Lubricants, Aviation, Asphalts and Specialties

Performance: increase in sales

Total sales at Lubricants, Asphalts and Specialties were up 17% on 2022, driven by higher sales at Asphalts and Specialties, while sales at Aviation were up 3%.

Decarbonization: new collaboration agreements

In May, a collaboration agreement was signed with Ryanair to promote the use of renewable fuels in Spain and Portugal. Thanks to this alliance, both companies are able to play a bigger role in the decarbonization of the airline industry and establish a collaboration framework for the coming years as we move toward sustainable air mobility.

Also in May, Repsol and Iberia Airport Services carried out, for the first time in Spain, the handling activities at Bilbao Airport with 100% renewable fuel. For a whole month, both companies used sustainable fuel —treated at the Petronor plant— for all aircraft and customer service operations at the airport.

LPG

Performance: reduction in sales

LPG sales in the first half of 2023 were lower than in the first half of 2022, largely a result of higher temperatures.

Decarbonization of factories

In the first six months of the year, four self-consumption photovoltaic plants continued to power the Puertollano, Montornés Pinto and Huelva factories (259,440 kWh; avoiding the emission of 123 metric tons of CO_2). This will be replicated over the rest of the year at two additional plants (Alcudia and Tarragona).

Electricity and gas commercialization

Performance: less energy sold but to more customers

The company's performance in the first half of 2023 was largely steered by an environment of lower energy prices than in 2022, which led to lower procurement costs.

Volumes traded at the end of June amounted to 2,004 GWh of electricity (2,184 GWh in 2022) and 839 GWh of gas (1,062 GWh in 2022), impacted by milder temperatures in the first half of the year.

At the end of June, Repsol had a customer base of 1.75 million customers, including the 224,000 customers of Gana Energía (a company accounted for using the equity method) and 34,000 from Portugal.

Customer portfolio acquisition

In April, an agreement was reached to acquire 50.01% of CHC Energías, an electricity and gas retail supply company with more than 300,000 customers. The agreement was completed in July following its approval by the Spanish markets and competition commission (CNMC).

Connected Energy Plans

Effective April 1, the company replaced the discounts for refueling at its service stations with a new savings proposition that includes not only fuels, but also electricity, gas, solar power and electric mobility. This extensive range allows Repsol customers to rely on a single supplier to cover all their energy needs and they can earn discounts on the fuel they buy by arranging their other energy products and making payment through the Waylet app.

Customers can accumulate savings in Waylet from 5 to 20 euro cents per liter of fuel on a permanent basis and up to 100% of the cost of recharging their electric vehicle at the company's public charging stations and service stations. They can also save up to 20% of the amount purchased at Repsol partners, depending on the number of energy services they have arranged with Repsol. The savings earned through Waylet can then be deducted from future payments at service stations and electric charging stations, from Repsol energy bills (electricity and gas), or from the cost of butane cylinders, heating oil, or gift cards, and also in any of the more than 4,400 establishments adhered to the Waylet network.

4.4 Low Carbon Generation

January	February	March	April	May	June
Start of production at the **Atacama wind farms in Chile** and at **San Bartolomé I and II in Spain**.	Acquisition of 100% of **Asterion Energies** and wind and solar assets (250 MW) from **ABO Wind**.	Start of production at the **Polux wind farm** (Spain).	**Start-up of production** at Solar Elena Phase I in **Chile**.	Increased stake in **Antofagasta in Chile** and announcement of further expansion in **Italy**.	Start-up of **production** at **Jicarilla I** (US) and agreement to promote the **offshore wind power** industry (Spain).

Main operating figures

	1H 2023	1H 2022
Generation capacity in operation (MW)[1]	4,241	3,860
Generation capacity under development [2]	3,064	1,537
Electric generation (GWh)[3]	3,951	4,245

[1] Includes installed capacity at hydroelectric and pumping plants (693 MW), combined cycle gas turbine (CCGT) plants (1,625 MW), cogeneration plants located at the Group's industrial complexes (600 MW), wind generation of 744 MW and solar generation of 579 MW.

[2] Wind generation of 1,056 MW and solar generation of 2,009 MW.

[3] Does not include electricity generated by cogeneration plants.

Main events in the period

Acquisition of Asterion Energies

In February, 100% of Asterion Energies was acquired from the European infrastructure fund Asterion Industrial in exchange for €576 million. The transaction includes a portfolio of 7,700 MW of renewable projects under development, 4,900 MW of solar PV and 2,800 MW of wind generation. The projects are mainly located in Spain, Italy and France. ● For more information see Note 3.1 Balance sheet to the 1H23 interim financial statements.

New assets in Spain

In February, an agreement was reached with the developer ABO Wind España to add a further 250 MW to our portfolio of renewable assets in Spain through the purchase of three wind farms (150 MW) and two solar power plants (100 MW) located in the province of Palencia. These assets are at an advanced stage of development and are scheduled to come on stream between 2024 and 2025.

Commissioning of projects in Chile, Spain and the United States

In January, the Atacama wind farm, which has an installed capacity of 165 MW and will produce more than 450 GWh per year, started producing electricity. In April, the Solar Elena photovoltaic plant came on stream. Phase one of this facility has 76.8 MWp of installed capacity. In May, an additional 35% interest in the Antofagasta wind farm (Chile) was acquired.

In January, production began at the San Bartolomé I and San Bartolomé II wind farms (99 MW of total capacity) and in March another farm was added, namely Polux (7.6 MW), all part of the larger Delta II project in Aragón, which already includes 60 MW from the Cometas I and II plants that came on stream in early 2022. The Delta II project will ultimately have 860 MW once its development is complete.

In February, production started at the Cantadal wind farm (9.8 MW) under the Pi project.

In June, trial production began at Jicarilla 1 (63 MWp) in the United States, and the associated battery storage system (20 MW/80 MWh) is now beginning to support power demand from the grid, again on a trial basis.

Total installed capacity in operation at June 30, 2023 was 4,241 MW, with a 40% increase in solar and wind renewable energy compared to the first half of 2022.

Expansion in Italy

Repsol has announced plans to develop renewable projects in Italy which, together with those described earlier in relation to Asterion Energies, will bring the total to 1,790 MW, comprising 943 MW wind and 847 MW solar. It will soon begin construction of its first two solar photovoltaic plants in Italy, which will have a capacity of 11 MW.

Agreements to support the offshore wind industry

Repsol, Ørsted and the Port Authority of A Coruña have signed an agreement to support the floating offshore wind industry by enabling the development, construction, operation and maintenance of future floating offshore wind projects.

Performance: lower production and prices

In the first half of 2023, electricity production amounted to 3,951 GWh compared to 4,245 GWh in the same period of 2022 (excluding cogeneration plant production). This reduction was a result of lower demand and the decline in combined cycle production, offset to some degree by the start-up of new renewable energy projects.

Power purchase prices fell during the period. ● *For more information, see section 2.2 Energy landscape.*

External support for the decarbonization strategy

In July, the European Investment Bank (EIB) granted a loan of €575 million for the deployment and commissioning of wind farms and photovoltaic plants in Spain with a total capacity of 1.1 GW, which are expected to be operational before the end of 2025.

5. Sustainability and Governance

Sustainability model

In the first half of 2023, the seventh edition of the new Global Sustainability Plan (GSP) was approved. The 2023 GSP envisions 43 medium-term objectives built around our Sustainability Model, and includes new commitments for the production of renewable hydrogen and the reduction of absolute CO_2 and methane emissions to move towards zero net emissions by 2050. In addition, 18 local plans were published in the first half of 2023 across 12 countries and at six industrial sites as part of the deployment of the GSP. The 2022 GSP achieved 90% compliance, while the local plans achieved more than 85% compliance.● *For more information on the Global Sustainability Plan and local Sustainability Plans, see www.repsol.com*.

As a sign of our commitment to the 2030 Agenda and our Contribution Plan, Repsol published the fourth edition of the report “Repsol’s contribution to the 17 SDGs”, focusing on those goals Repsol contributes the most to due to its activities, namely SDGs 7, 8 and 13 and SDG 6, 9, 12 and 17. The report shows more than 35 indicators and contribution projects.

Climate change

As every year, verifications of greenhouse gas (GHG) inventories were carried out under the ISO 14064 standard at the assets operated by Upstream, at the combined cycle plants of the Low Carbon Generation business and at the company's offices in Madrid. The industrial sites are currently in the process of adapting to the new standard, which includes Scope 3 emissions. Once the checks have been completed, the information will be made public on the website.

In addition, for the second year, the Carbon Intensity Indicator (CII) has been verified, which measures the progress made toward meeting the goal of achieving zero net emissions by 2050. External verification is carried out within the framework of the sustainability bonds issued in 2021 and the corresponding report is available on the Company’s website.

The Company continues to make progress toward its decarbonization roadmap. As part of the plan to reduce greenhouse gas emissions, various improvement actions were deployed at the facilities that succeeded in avoiding 55,000 metric tons of CO_2 emissions during the first half of 2023.

Repsol earned certification from LRQA confirming the carbon footprint of its range of high purity liquefied gases (HPLG). These products are used, among others, in cosmetics, household goods, automotive, food and insecticides.

Environment

In 2023, Repsol joined the EU Business@biodiversity Platform set up by the European Commission to work alongside companies in measuring and making the value of biodiversity part of their business decision-making processes.

For the second year running, Repsol’s circular economy strategy earned the AENOR 100% Circular Strategy certificate. AENOR highlights Repsol’s alignment with the circular economy principles of sharing, optimizing, virtualizing, exchanging, regenerating, innovation and transparency. Further highlights included the launch of: (i) a project at service stations in Madrid to offer a new collection service for used cooking oil, which can then be used as a raw material to produce renewable fuels; and (ii) a new range of bio-based polyolefins to reduce CO_2 emissions. ● *For more information, see section 4.2 Industrial and section 4.3 Customer.*

Technology and innovation

In the first half of 2023, the Company invested in decarbonization technologies such as RepAir, a startup dedicated to CO_2 direct air capture or GreenVal, a startup specialized in revaluing end-of-life tires through pyrolysis.

In addition, a pilot plant for high-temperature pyrolysis was set up and brought online at the Móstoles center. The pilot is a proprietary technological development of Repsol Technology Lab, which aims to produce circular olefins with a low carbon footprint, and will ultimately succeed in reducing the current footprint by up to 60%.

The Company also began work to develop a Digital Twin of the new biofuels plant in Cartagena (C43), which is able to process the new raw materials. Thanks to this data modeling tool capable of simulating real production situations, we will be able to uniquely represent hydrotreating and hydroisomerization operations to transform waste lipids into advanced biofuels, thus enabling us to optimize these processes.

In digitalization, highlights included the creation of the first Competence Center for generative artificial intelligence (AI) in the European energy sector.

Operational safety

In 2023, Repsol launched a Safety Excellence Program, promoted by the Executive Committee. The aim of the program is to improve and systematize safety processes (human factors, safety culture, indicators, potential risks, incident investigation, etc.), while focusing on improving their effectiveness, with the objective of minimizing major and high-potential accidents. The project is being coordinated by a corporate department set up specifically for this purpose, targeting inclusiveness and business leadership.

Human rights and community relations

During the period, Repsol updated its Human Rights and Community Relations Policy, which has since been approved by the Executive Committee. The policy enshrines the Company’s commitment to respect, in all its activities and business relations, the human rights internationally recognized in international treaties, standards and legislation on business and human rights.

In relation to the actions undertaken in response to the oil spill that occurred in 2022 while unloading crude oil at the La Pampilla refinery, the remediation phase of the Social Action Plan was successfully completed in the first half of 2023. Notably, nearly 10,000 compensation agreements were signed with the affected persons, out of the approximately 10,300 affected persons recognized by the authorities.

In parallel, the development phase of the Social Action Plan got underway with the launch of a social and economic reactivation program at the five districts affected by the spill. The program includes various sustainable development projects to support those affected, promote entrepreneurship in the affected sectors and improve economic activity in these districts. Social cohesion activities are also included as part of the activities.

All actions are being carried out under the Social Action Plan while maintaining continuous and transparent dialogue with authorities, associations and representatives of these stakeholders in order to optimize the process and maximize its effectiveness. ● *For more information on the social and environmental management of the spill, see www.compromisorepsol.pe. For more information on the risks and contingencies associated with the spill, see Notes 4.1 Disputes and 4.4 Environmental risks to the 1H23 interim financial statements.*

Responsible tax policy

Repsol continued to make a significant tax contribution in the first half of 2023, paying €7,343 million in taxes and similar public charges overall, of which €4,960 million was paid in Spain.

Own taxes accrued amounted to €2,186 million, accounting for 59% of our profits. In particular, and in relation to corporate income tax, the Repsol Group's corporate income tax rate was 40% (well above the nominal rate in Spain of 25% and the average for OECD countries).

Repsol fosters cooperative and transparent relations with the tax authorities. Having already taken part in the pilot scheme of the OECD's International Compliance Assurance Programme (ICAP), the Company is now participating in the pilot of the European Trust and Cooperation Approach (ETACA) of the European Union. It is also worth noting that Repsol has presented its Voluntary Tax Transparency Report to the Spanish tax office (AEAT) for the eighth year running and is working alongside the Brazilian authorities in implementing the CONFIA program. Elsewhere, it has been classified by the Singaporean authorities as a "trusted" operator ("ACAP Premium").

When it comes to public transparency and accountability towards society, Repsol voluntarily publishes various reports on its website (www.repsol.com) detailing and explaining the taxes paid in the last year, including the income tax "country by country report" as well as the activity in non-cooperative jurisdictions and other controversial territories. This commitment to voluntary transparency and tax responsibility has been recognized by accredited civil society organizations. ● *For more information on tax responsibility, see www.repsol.com.*

Taxes paid in the first half of 2023(1)

	Taxes paid(2)		Own taxes			Third-party taxes

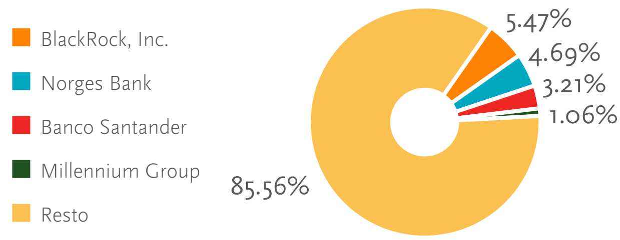
(1) Information prepared in accordance with the Group's reporting model described in "Information" (page 2 of this document).
(2) The amount includes refunds from previous years €307 million in 2023 and €112 million in 2022.
(3) Tax on hydrocarbons. Includes what is paid through logistics operators when the Company is ultimately responsible for payment.

Corporate governance

The General Shareholders' Meeting held on May 25, 2023 approved the re-election as directors of Antonio Brufau Niubó, Josu Jon Imaz San Miguel, Aránzazu Estefanía Larrañaga, María Teresa García-Milá Lloveras, Henri Philippe Reichstul and John Robinson West, and the ratification and re-election as director of Manuel Manrique Cecilia. All of them, for the bylaw-mandated term of four years. In addition, the Board appointed María del Pino Velázquez Medina as independent director.

Repsol's commitment to sustainability is recognized within the market, as evidenced by the fact that as of the reporting date, 40% of the Company's institutional investors today are socially and environmentally responsible investors.

Shareholder composition (latest information available)



6. Outlook

6.1 Outlook for the sector

Macroeconomic outlook

Global GDP growth slowed significantly throughout 2022, although several of the factors weighing heavily on economic activity have been steadily dissipating.

For instance, supply bottlenecks have been unraveling, as have the prices of energy and other raw materials, thus helping to control inflation. The rebound in China's economy following its reopening —albeit with doubts about its strength and durability —, along with solid employment figures and relatively resilient household finances, are also factors supporting the global economy.

However, given that the effects of monetary tightening take time to appear and considering also that other sources of instability persist, economic activity will remain weak by previous standards.

Notably, the IMF's April baseline scenario expects global GDP to grow by 2.8% in 2023 and 3.0% in 2024. This represents a downgrade for 2023 of 0.1 percentage point (p.p.) from the previous forecast released in January.

However, the adverse impact varies greatly between regions and countries. Europe has been more negatively affected by the war, given its greater reliance on energy imports and the impact of refugee movements. Indeed, the Eurozone's growth forecast for 2023 is just 0.8%.

IMF macroeconomic forecast

	Growth in real GDP (%)		Average inflation (%)	
	2023	2022	2023	2022
Global economy	2.8	3.4	7.0	8.7
Advanced countries	1.3	2.7	4.7	7.3
Spain	1.5	5.5	4.3	8.3
Emerging countries	3.9	4.0	8.6	9.8

Source: IMF (World Economic Outlook April 2023) and Repsol Research Unit.

Against this backdrop, forecasts and projections will be fraught with uncertainty. And the risks to these growth forecasts are skewed to the downside. One particular risk is that, although central banks are nearing the end of their interest rate hiking cycle, if core inflation proves to be more stubborn than expected, future interest rate cuts may take longer than expected to materialize. Another related risk is that the current monetary tightening will lead to further episodes of financial instability, a sizeable credit squeeze and a sharp reassessment of the risk exposure that investors are willing to accept. Aside from damaging growth, this situation would impair the ability of central banks to achieve both financial stability and price control.

Energy sector outlook

World oil demand is close to peaking. According to Fatih Birol, executive director of the International Energy Agency (IEA), global oil consumption will continue to grow, but growth will slow significantly after 2028, which contrasts with what was stated in the World Energy Outlook 2022 released in October last year. In that report, the IEA proclaimed that peak demand would occur after 2035. According to the IEA, global oil demand growth will slow progressively and is expected to continue to do so after 2028. The petrochemical sector will lead growth, while oil use in the transport sector will decline from 2026 onwards. Thus, global oil demand looks set to grow to 105.7 mb/d in 2028, 5.9 mb/d above 2022 levels. By product, cumulative demand growth will be highest in LPG and naphtha, feedstocks for the petrochemical industry, followed by jet fuel/kerosene used in the aviation sector, and, to a lesser extent, diesel. In contrast, the IEA expects to see negative growth in gasoline demand, whose higher consumption in developing economies would be countered by the steadily increasing penetration of electric vehicles, along with energy efficiency improvements.

Turning to the gas market in the United States, dry gas production is expected to reach 103 Bcf/d in the second half of 2023, slightly below previous estimates but still at peak levels. This downgrade in production comes in response to the drop in the HH spot price, which now stands at 75% of its peak level reported in August 2022. However, growth in associated natural gas production at the Permian Basin is expected to partially offset declines in dry gas production. Meanwhile, we expect prices to increase throughout the summer as production decreases slightly and demand for air conditioning and other cooling solutions picks up, thus increasing the sector's gas consumption for power generation. Beyond the fundamentals, demand will also be crucially influenced by the energy/climate policies that the government pursues and the strength with which Asian demand can be met in the winter.

6.2 Outlook for our businesses

The Group's business plans for the second half of 2023 fall within the context of the 2021-2025 Strategic Plan, a roadmap for the Company, which included a second period, from 2023 to 2025, in which the main growth projects would take place, thus accelerating the transformation.

The Group continues to move towards its goal of being a leader in the energy transition and meeting its goals regarding growth, diversification and focus on multi-energy, ensuring profitability and maximum value for shareholders. All this while implementing a prudent financial policy, and maintaining caution in a still volatile environment.

The Renewables business remains one of the mainstays of the energy transition. Therefore, in the second half of 2023 the Group will continue to start up development projects in Spain and the United States, and will move forward on new portfolio and international expansion projects.

The Industrial businesses will continue to drive the transformation and the circular economy through renewable hydrogen generation and advanced biofuel production projects in Cartagena, and by developing other initiatives involving biomethane, efuels, circularity and waste recovery. In tandem, they will continue with the program to decarbonize our industrial centers and increase the reliability and flexibility of the plants, while also ensuring the differentiation of high-value products and incorporating energy efficiency measures.

The commercial businesses will continue to optimize operations, accompanying customers in the energy transition, with an integrated and differentiated value proposition, and consolidating a competitive position at the service of society.

The Upstream business will continue to prioritize value creation, with a special focus on the efficiency and safety of operations.

Meanwhile, at the corporate areas, work will continue in the second half of 2023 to increase efficiency, automate processes and contribute to the profitability of the entire organization through, among other projects, the "Second Digital Wave", which promotes the implementation of models, digital products and disruptive technologies to accelerate the digital transformation as a key lever for the energy transition and business efficiency. As an additional lever, the Technology strategy will support the businesses to improve their competitiveness by streamlining operations and providing efficiency.

In order to accelerate the Company's transformation, organic investment is expected to exceed €5,000 million by 2023 - provided that the macroeconomic and business environment is favorable-, which is a significant increase compared to previous years.

In addition, shareholders will be offered attractive returns in 2023, which are expected to exceed 30% of operating cash flow. These returns will be distributed in the form of a dividend of €0.70 per share and a capital reduction.

6.3 Highlights in the second half of the year

The following relevant events took place in the second half of 2023 and prior to publication of this report:

- A final cash dividend of €0.35 gross per share was paid out with a charge to profit for 2022 and a capital reduction was agreed to, through the redemption of 60 million shares of treasury stock with a par value of one euro each.
- The acquisition of the 50.01% interest in CHC Energía, an electricity and gas retailer with more than 300,000 customers, was completed.
- The European Investment Bank (EIB) granted a loan of €575 million for the deployment and commissioning of wind farms and photovoltaic plants in Spain with a total capacity of 1.1 GW.

6.4 Risks

The market outlook remains highly uncertain and volatile, as it did in 2022. The main risks to which the Group is exposed are disclosed in section 7.4 and Appendix IV of the 2022 Management Report. It is worth noting that Repsol has no equity exposure or significant commercial position in Russia following the divestment of all its assets in this country in 2021. However, it is exposed to indirect risks arising from the new macroeconomic scenario to have emerged from the war, as described in section 7.5 of the 2022 Management Report.

This information regarding risks is updated and complemented by the information included in Note 4 to the consolidated interim financial statements for the first half of 2023.

Appendix II. Alternative performance measurements

Repsol's financial information contains indicators and measures prepared in accordance with applicable financial reporting standards and regulations, as well as other measures prepared in accordance with the Group's Reporting Model, defined as Alternative Performance Measures (APMs). APMs are measures that are "adjusted" compared to those presented in accordance with IFRS-EU or with Supplementary Information on Oil and Gas Upstream Activities, and the reader should therefore consider them in addition to, but not instead of, the latter.

Repsol presents its segment performance measures including joint ventures or other companies which are jointly managed in accordance with the Group's investment percentage, considering its operational and economic indicators within the same perspective and degree of detail as those for companies consolidated under the full consolidation method. Thus, the Group considers that the nature of its businesses and the way in which results are analyzed for decision-making purposes is adequately reflected.

In 2023, following the entry of certain non-controlling interests in our Upstream and LCG businesses, Repsol has revised the way it presents its results. As of this year, the "Adjusted income" of the businesses does not include the stakes held by non-controlling interests and therefore reflects solely the results managed by the Company. For the same reason, non-controlling interests are not taken into account either in the "Inventory effect" or in "Special items". The impact of "Non-controlling interests" is shown in a separate line immediately before "Net income". Although the amount of non-controlling interests in previous years was not significant, Repsol has restated the information for 2022 to allow readers to track the figures over time and compare periods. Repsol also updated the definitions of its reporting segments in 2023, in response to the performance of its businesses and changes in its organizational structure[1].

● *For more information, see Note 2 Segment information of the 1H23 interim financial statements.*

APMs are useful for users of financial information as they are the measures employed by Repsol's Management to evaluate its financial performance, cash flows or financial position when making operational or strategic decisions for the Group.

● *For historical quarterly APM information, see www.repsol.com.*

1. Financial performance measures

Adjusted income

Adjusted income is the key financial performance measure that Management (the Executive Committee) consults when making decisions[2].

Adjusted income is calculated as ***income from operations at current cost of supply*** (or CCS), net of taxes and excluding certain income and expenses ***(Special items)***, the ***Inventory effect*** and results attributable to ***non-controlling interests***. ***Financial income*** is allocated to the adjusted income of the "Corporate and others" segment.

Adjusted income is a useful APM for investors in evaluating the performance of operating segments while enabling increased comparability with Oil & Gas sector companies that use different inventory measurement methods (see the following section).

Inventory effect

For current cost of supply (CCS) earnings, the cost of volumes sold is calculated on the basis of procurement and production costs[3] incurred during the period in question and not based on weighted average cost (WAC), which is the accepted methodology under European accounting law and regulations. The difference between CCS earnings and WAC earnings is included in the so-called ***Inventory effect***, which also includes other adjustments to the valuation of inventories (write-offs, economic hedges, etc.) and is presented net of taxes and excluding results attributable to non-controlling interests. This Inventory effect largely affects the Industrial segment. Repsol management considers that this measurement is useful for investors, considering the significant variations arising in the prices of inventories between periods.

WAC is a generally accepted European accounting method for measuring inventories. It factors in purchase prices and historic production costs, valuing inventory at the lower between this cost and its market value.

Special items

Significant items for which separate presentation is considered desirable to facilitate the task of monitoring the ordinary management of business operations and for comparison between periods and companies in the sector. This heading includes capital gains/losses due to divestments (capital gains and losses due to transfers or disposals of assets), restructuring costs (compensation costs, etc.), impairment (provisions and reversals resulting from the impairment test on fixed assets, recoverability of tax credits, etc.), provisions for risks and expenses (provisions and reversals of provisions for tax, legal, environmental, geopolitical risks, etc.) and other major income or expense items outside the ordinary management of the businesses (provisions for dismantling and remediation; exchange rate impacts on fiscal positions in foreign currency; costs and compensation due to claims; sanctions and fines;

[1] The business segment hitherto known as "Commercial and Renewables" has been split into "Customer" (commercial business with a customer-focused multi-energy offering) and "Low Carbon Generation" (low-emission power generation and renewables business).
[2] The measure of each segment's earnings (formerly known as "Adjusted Net Income") has been updated in 2023 (see introductory paragraphs).
[3] Cost of supplies is calculated on the basis of international quoted prices in the reference markets in which the Company operates. The relevant average monthly price is applied to each quality of distilled crude. Quoted prices are obtained from daily crude oil publications according to Platts, while freight rates are estimated by Worldscale (which publishes global reference prices for freight costs from one port to another). All other production costs (fixed and variable costs) are valued at the cost recognized in the accounts.

valuation of financial instruments resulting from accounting asymmetries, etc.). Special items are presented net of taxes and without counting income attributable to non-controlling interests.

Non-controlling interests:

Shows results attributable to non-controlling interests in relation to operating income, the Inventory effect and Special items, which are presented separately before Net income.

EBITDA

EBITDA, or Earnings Before Interest, Taxes, Depreciation and Amortization, is a financial indicator showing the operating margin of a company before deducting interest, taxes, impairment, depreciation and amortization.

Since it does not include financial and tax indicators or accounting expenses not involving cash outflow, it is used by Management to evaluate the company's results over time, for a more straightforward exercise in making comparisons with peers within the Oil & Gas sector.

EBITDA is calculated as operating income + depreciation and amortization + impairment, as well as other items that do not represent cash inflows or outflows from transactions (restructuring, capital gains/losses from divestment, provisions, etc.). Operating income corresponds to the result from operations at weighted average cost (WAC). Where net income from **operations at current cost of supply** (CCS) is used, it is known as **CCS EBITDA**.

ROACE:

This APM is used by Repsol Management to evaluate the capacity of its operating assets to generate profit, and therefore measures the efficiency of Capital employed (equity and debt).

ROACE ("*Return on average capital employed*") is calculated as: (Adjusted income, excluding the financial result, + Inventory effect + Special items) / (Average ***capital employed*** for the period in operations, which measures own and external capital employed by the Company, and comprises Total equity + Net debt). The figure includes joint ventures or other companies managed operationally as joint ventures. If the Inventory effect is not used in the calculation process, it is known as ***CCS ROACE***.

NUMERATOR (*€ million*)	**1H 2023**	**1H 2022**
Operating income (IFRS-EU)	**2,309**	**3,664**
Reclassification of joint ventures	260	931
Income tax[1]	(1,035)	(1,990)
Net income of companies accounted for using the equity method - net of tax	12	—
I. ROACE result at weighted average cost	**1,546**	**2,605**

DENOMINATOR (*€ million*)	**1H 2023**	**1H 2022**
Total equity	28,098	25,346
Net financial debt	797	5,031
Capital employed at period-end	**28,895**	**30,377**
II. Average capital employed[2]	**28,561**	**29,467**
ROACE (I/II)[3]	**5.4 %**	**8.8 %**

[1] Does not include income tax corresponding to financial results.
[2] Corresponds to the average balance of capital employed at the beginning and end of the year.
[3] ROACE on CCS (without taking into account the Inventory Effect) amounts to 7.3%.

2. Cash flow measurements

Operating cash flow, free cash flow, cash generated and liquidity:

Operating cash flow measures the generation of cash flow corresponding to operations and is calculated as: EBITDA +/- Changes in working capital + Dividends received + Income tax received / - paid + Other proceeds / - payments relating to operating activities. Due to its usefulness and to show how cash flow changes between periods by isolating changes in working capital, operating cash flow can be presented excluding working Capital (Operating cash flow "ex working capital" or "OCF exWC").

Free cash flow measures cash flow generation from operating and investment activities, and is useful for evaluating the funds available for paying shareholder dividends and servicing debt.

Cash generation is ***free cash flow*** less dividend payments, payment of remuneration for other equity instruments (coupons on perpetual bonds), transactions with non-controlling interests (dilutions, capital contributions, dividends, etc.), net interest payments, and payments for leases and treasury shares. This APM measures the funds generated by the Company before financial transactions (mainly debt issuance and repayments).

The following is a reconciliation of the ***Free cash flow*** and ***Cash generation*** under the Group's reporting model with the consolidated statement of cash flows under IFRS-EU:

Cash flow measurements	**Second quarter**					
	Cash flow		**Reclassification of joint ventures and others**		**Statement of cash flows IFRS-EU**	
€ million	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**

Liquidity	**11,441**	**12,014**	**(349)**	**(440)**	**11,092**	**11,575**

(1) Repsol arranges time deposits but with immediate availability, as recognized under "*Other current financial assets*", and which do not meet the accounting criteria for classification as cash and cash equivalents.

Operating investments (investments):

Group Management uses this APM to measure each period's investment effort and allocation by business segment, reflecting operating investments by the various Group business units (including accrued and unpaid investments). The figure includes joint ventures or other companies managed operationally as joint ventures.

Investments may be presented as organic (funds invested in the development or maintenance of the Group's projects and assets) or inorganic (acquisition of projects, assets or companies for the expansion of the Group's activities).

Investments	Second quarter

[(1)] Relates to "*Payments on investments*" on the consolidated statement of cash flows prepared under IFRS-EU, and does not include items corresponding to "Other financial assets".

3. Financial position measures

Debt and financial position ratios:

Net debt is the main APMs used by Management to measure the Company's level of debt. The figure is made up of financial liabilities less financial assets, cash and cash equivalents, and the effect arising from the mark-to-market of financial derivatives. It also includes the net debt of joint ventures and other companies operationally managed as such.

Net Debt	Net debt	Reclassifications of joint ventures	IFRS-EU balance sheet
€ million	Jun-2023	Jun-2023	Jun-2023

Current liabilities			
Current financial liabilities [(2)]	(2,097)	(88)	(2,185)
NET DEBT [(3)]	**(797)**	**(480)**	**(1,277)**

[(1)] Amounts included under "*Non-current financial assets*" in the consolidated balance sheet.
[(2)] Includes net non-current and current leases amounting to €-3,048 and €-619 million, respectively, according to the Reporting model and € -2,449 and €-489 million, respectively, according to the IFRS-EU balance sheet.
[(3)] The reconciliations in previous period are available at www.repsol.com.

Gross debt is the measure used to analyze the Group's solvency and includes financial liabilities and the net mark-to-market value of derivatives. It also includes the debt of joint ventures and other companies operationally managed as such.

Gross Debt	Gross debt	Reclassifications of joint ventures	IFRS-EU balance sheet

Net mark to market valuation of non-current exchange rate derivatives			—
Non-current gross debt	**(9,449)**	**(536)**	**(9,984)**
GROSS DEBT [(1)]	**(11,433)**	**(633)**	**(12,066)**

[(1)] The reconciliations in previous periods for this figure are available at www.repsol.com.

The following ratios are used by Group Management to evaluate everage ratios and Group Solvency.

- The ***Leverage ratio*** is ***Net debt*** divided by ***Capital employed*** at the end of the period. This ratio can be used to examine financial structure and degree of indebtedness in relation to capital contributed by shareholders and financing entities. Leverage is the chief measure used to evaluate and compare the Company's financial position with respect to its peers in the Oil & Gas industry.
- The ***Solvency ratio*** is calculated as ***Liquidity*** (section 2 of this Appendix) divided by ***current Gross debt*** and is used to determine the number of times the Group may service its current debt using its existing liquidity.
